

THE BMW X3. OWNER'S MANUAL.

BMW EfficientDynamics Less emissions. More driving pleasure.

X3 Owner's Manual for Vehicle

Thank you for choosing a BMW.

The more familiar you are with your vehicle, the better control you will have on the road. We therefore strongly suggest:

Read this Owner's Manual before starting off in your new BMW. Also use the Integrated Owner's Manual in your vehicle. It contains important information on vehicle operation that will help you make full use of the technical features available in your BMW. The manual also contains information designed to enhance operating reliability and road safety, and to contribute to maintaining the value of your BMW.

Any updates made after the editorial deadline for the printed or Integrated Owner's Manual are located in the appendix of the printed quick reference for the vehicle.

Supplementary information can be found in the additional brochures in the onboard literature.

We wish you a safe and enjoyable drive.

Using this Owner's Manual

The fastest way to find information on a particular topic is by using the index.

An initial overview of the vehicle is provided in the first chapter.

Updates made after the editorial deadline

Any updates made after the editorial deadline for the Owner's Manuals are located in the appendix of the printed quick reference for the vehicle.

User's manual for Navigation, Entertainment, Communication

The topics of Navigation, Entertainment, Communication and the short commands of the voice activation system are described in a separate user's manual, which is also included with the onboard literature.

Additional sources of information

Should you have any questions, your service center will be glad to advise you at any time. Information on BMW, e.g., on technology, is available on the Internet: bmwusa.com.

Symbols

- ⚠ Indicates precautions that must be followed precisely in order to avoid the possibility of personal injury and serious damage to the vehicle.

Symbols on vehicle components

indicates that you should consult the relevant section of this Owner's Manual for information on a particular part or assembly.

Vehicle equipment

This Owner's Manual describes all models and all standard, country-specific and optional equipment that is offered in the model series. Therefore, in this Owner's Manual, equipment is also described and illustrated that is not available in your vehicle, e.g., because of the selected optional equipment or the country-specific variants.

This also applies for safety-related functions and systems.

For options and equipment not described in this Owner's Manual, please refer to the Supplementary Owner's Manuals.

On right-hand drive vehicles, some controls are arranged differently than shown in the illustrations.

Status of the Owner's Manual

The manufacturer of your vehicle pursues a policy of constant development that is conceived to ensure that our vehicles continue to embody the highest quality and safety standards. In rare cases, therefore, the features described in this Owner's Manual may differ from those in your vehicle.

Updates made after the editorial deadline

Any updates made after the editorial deadline for the Owner's Manuals are located in the appendix of the printed quick reference for the vehicle.

For your own safety

Maintenance and repairs

Advanced technology, e.g., the use of modern materials and high-performance electronics, requires suitable maintenance and repair methods.

Therefore, have this work performed only by a BMW center or a workshop that works according to BMW repair procedures with appropriately trained personnel.

If this work is not carried out properly, there is the danger of subsequent damage and related safety hazards.

Parts and Accessories

For your own safety, use genuine parts and accessories approved by BMW. When you purchase accessories tested and approved by BMW and Genuine BMW Parts, you simultaneously acquire the assurance that they have been thoroughly tested by BMW to ensure optimum performance when installed on your vehicle. BMW warrants these parts to be free from defects in material and workmanship. BMW will not accept any liability for damage resulting from installation of parts and accessories not approved by BMW. BMW cannot test every product made by other manufacturers to verify if it can be used on a BMW safely and without risk to either the vehicle, its operation, or its occupants. Genuine BMW Parts, BMW Accessories and other products approved by BMW, together with professional advice on using these items, are available from all BMW centers. Installation and operation of non-BMW approved accessories such as

alarms, radios, amplifiers, radar detectors, wheels, suspension components, brake dust shields, telephones, including operation of any mobile phone from within the vehicle without using an externally mounted antenna, or transceiver equipment, for instance, CBs, walkietalkies, ham radios or similar accessories, may cause extensive damage to the vehicle, compromise its safety, interfere with the vehicle's electrical system or affect the validity of the BMW Limited Warranty. See your BMW center for additional information. Maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any certified automotive part.

California Proposition 65 Warning

California laws require us to state the following warning:

Engine exhaust and a wide variety of automobile components and parts, including components found in the interior furnishings in a vehicle, contain or emit chemicals known to the State of California to cause cancer and birth defects and reproductive harm. In addition. certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Battery posts, terminals and related accessories contain lead and lead compounds. Wash your hands after handling. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing thoroughly with soap and water.

Service and warranty

We recommend that you read this publication thoroughly. Your vehicle is covered by the following warranties:

- New Vehicle Limited Warranty.
- Rust Perforation Limited Warranty.

- Federal Emissions System Defect Warranty.
- Federal Emissions Performance Warranty.
- California Emission Control System Limited Warranty.

Detailed information about these warranties is listed in the Service and Warranty Information Booklet for US models or in the Warranty and Service Guide Booklet for Canadian models.

Your vehicle has been specifically adapted and designed to meet the particular operating conditions and homologation requirements in your country and continental region in order to deliver the full driving pleasure while the vehicle is operated under those conditions. If you wish to operate your vehicle in another country or region, you may be required to adapt your vehicle to meet different prevailing operating conditions and homologation requirements. You should also be aware of any applicable warranty limitations or exclusions for such country or region. In such case, please contact Customer Relations for further information.

Maintenance

Maintain the vehicle regularly to sustain the road safety, operational reliability and the New Vehicle Limited Warranty.

Specifications for required maintenance measures:

- BMW Maintenance system
- Service and Warranty Information Booklet for US models
- Warranty and Service Guide Booklet for Canadian models

If the vehicle is not maintained according to these specifications, this could result in serious damage to the vehicle. Such damage is not covered by the BMW New Vehicle Limited Warranty.

Data memory

Many electronic components on your vehicle are equipped with data memories that temporarily or permanently store technical information about the condition of the vehicle, events and faults. This technical information generally documents the state of a component, a module, a system or the environment:

- Operating states of system components, fill levels for instance.
- Status messages for the vehicle and from its individual components, e.g., wheel rotation speed/ vehicle speed, deceleration, transverse acceleration.
- Malfunctions and faults in important system components, e.g., lights and brakes.
- Responses by the vehicle to special situations, e.g., deployment of an airbag, engagement of stability control systems.
- Ambient conditions, such as temperature.

This data is purely technical in nature and is used to detect and correct faults and to optimize vehicle functions. Motion profiles over routes traveled cannot be created from this data. When service offerings are used, e.g., repair services, service processes, warranty claims, quality assurance, this technical information can be read out from the event and fault memories by the service personnel, including the manufacturer, using special diagnostic tools. You can obtain further information there if it is needed. After a fault is corrected, the information in the fault memory is deleted or overwritten on a continuous basis.

When the vehicle is in use, situations are conceivable in which it might be possible to associate this technical data with individuals if it is combined with other information, e.g., an accident report, damage to the vehicle, eye witness accounts — possibly with the assistance of an expert.

Additional functions that are contractually agreed with the customer, such as vehicle lo-

cating in an emergency, enable certain vehicle data to be transmitted from the vehicle.

Event Data Recorder EDR

This vehicle is equipped with an event data recorder EDR. The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.

The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating.
- Whether or not the driver and passenger safety belts were fastened.
- How far, if at all, the driver was depressing the accelerator and/or brake pedal.
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

EDR data are recorded by your vehicle only if a nontrivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data, e.g., name, gender, age, and crash location, are recorded.

However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

Reporting safety defects

For US customers

The following only applies to vehicles owned and operated in the US.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration NHTSA, in addition to notifying BMW of North America, LLC, P.O. Box 1227, Westwood, New Jersey 07675-1227, Telephone 1-800-831-1117.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign.

However, NHTSA cannot become involved in individual problems between you, your dealer, or BMW of North America, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov

For Canadian customers

Canadian customers who wish to report a safety-related defect to Transport Canada, Defect Investigations and Recalls, may telephone the toll-free hotline 1-800-333-0510. You can also obtain other information about motor vehicle safety from http://www.tc.gc.ca/roadsafety.

At a glance These overviews of buttons, switches and displays are intended to familiarize you with your vehicle. You will also become quickly acquainted with the available control concepts and options. Online Edition for Part no. 01 40 2 911 041 - VI/13

iDrive

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

The concept

The iDrive combines the functions of a multitude of switches. Thus, these functions can be operated from a central location.

Using the iDrive during a trip

To avoid becoming distracted and posing an unnecessary hazard to your vehicle's occupants and to other road users, never attempt to use the controls or enter information unless traffic and road conditions allow this.

Controls at a glance

Operating concept

Opening the main menu

MENU

Press the button.

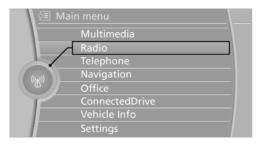

The main menu is displayed.

All iDrive functions can be called up via the main menu.

Selecting menu items

Menu items shown in white can be selected.

 Turn the controller until the desired menu item is highlighted.

Press the controller.

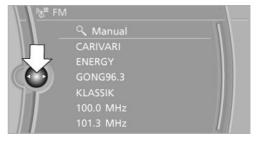

Menu items in the Owner's Manual

In the Owner's Manual, menu items that can be selected are set in quotation marks, e.g., "Settings".

Changing between panels

After a menu item is selected, e.g., "Radio", a new panel is displayed. Panels can overlap.

- Move the controller to the left.
 - The current panel is closed and the previous panel is displayed.
 - The previous panel is opened again by pressing the BACK button. In this case, the current panel is not closed.
- Move the controller to the right.
 A new panel is opened on top of the previous display.

White arrows pointing to the left or right indicate that additional panels can be opened.

View of an opened menu

When a menu is opened, it generally opens with the panel that was last selected in that menu. To display the first panel of a menu:

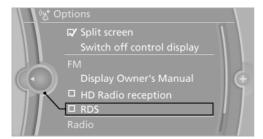

- Move the controller to the left repeatedly until the first panel is displayed.
- Press the menu button on the controller twice.

Opening the Options menu

Press the button.

The "Options" menu is displayed.

Additional options: move the controller to the right repeatedly until the "Options" menu is displayed.

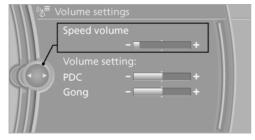

Options menu

The "Options" menu consists of various areas:

- Screen settings, e.g., "Split screen".This area remains unchanged.
- ▶ Control options for the selected main menu, e.g., for "Radio".
- If applicable, further operating options for the selected menu, e.g., "Store station".

Changing settings

- 1. Select a field.
- Turn the controller until the desired setting is displayed.

Press the controller.

Activating/deactivating the functions

Several menu items are preceded by a checkbox. It indicates whether the function is activated or deactivated. Selecting the menu item activates or deactivates the function.

The function is activated.

The function is deactivated.

Touchpad

Some iDrive functions can be operated using the touchpad on the controller:

Selecting functions

- 1. "Settings"
- "Touchpad"
- Select the desired function.
 - ▶ "Speller": letters and numbers, entering.
 - "Map": operating the interactive map.
 - "Browser": enter Internet addresses.
 - "Audio feedback": the entered letters and numbers are announced.

Entering letters and numbers

The entry of the letters requires some practice at the beginning. In the entry, pay attention to the following:

- For the entry of large/small letters and numbers, first convert via iDrive to the corresponding Input mode, refer to page 22.
- ▶ Enter characters as they are displayed on the Control Display.
- Always enter accompanying signs, such as accents or periods so that the letter can be clearly recognized.
- ➤ To delete a character, slide to the left on the touchpad.

Operating the interactive map

The interactive map in the navigation system can be moved via the touchpad.

Controls
Slide in the corresponding direction.
Drag the display inwards or outwards with the fingers.
Tap once.

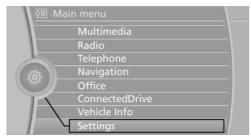

Changing settings

Settings on the control display, such as the volume, can be made via the touchpad. To do this slide to the left or right accordingly.

Example: setting the clock

Setting the clock

- 1. Press the button. The main menu is displayed.
- Turn the controller until "Settings" is highlighted, and then press the controller.

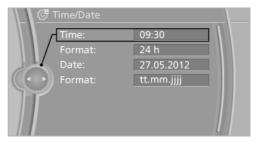

3. If necessary, move the controller to the left to display "Time/Date".

4. Turn the controller until "Time/Date" is highlighted, and then press the controller.

5. Turn the controller until "Time:" is highlighted, and then press the controller.

- Turn the controller to set the hours and press the controller.
- Turn the controller to set the minutes and press the controller.

Status information

Status field

The following information is displayed in the status field at the top right:

- Time.
- Current entertainment source.
- Sound output, on/off.
- Wireless network reception strength.
- Telephone status.
- Traffic bulletin reception.

Split screen

General information

Additional information can be displayed on the right side of the split screen, e.g., information from the computer.

In the divided screen view, the so-called split screen, this information remains visible even when you change to another menu.

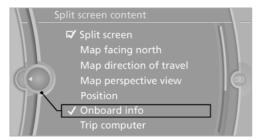

Switching the split screen on and off

- 1. Press the button.
- 2. "Split screen"

Selecting the display

- 1. Press the button.
- 2. "Split screen"
- Move the controller until the split screen is selected.

- Press the controller or select "Split screen content".
- 5. Select the desired menu item.

Programmable memory buttons

General information

The iDrive functions can be stored on the programmable memory buttons and called up directly, e.g., radio stations, navigation destinations, phone numbers and entry points into the menu.

The settings are stored for the remote control currently in use.

Without navigation system and telephone

Only radio stations can be stored on the buttons, refer to user's manual for Navigation, Entertainment, Communication.

Saving a function

- 1. Highlight the function via the iDrive.
- 2. 1...8 Press the desired button for more than 2 seconds.

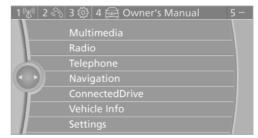

Running a function

Press the button.
The function will run immediately. This means, for example, that the number is dialed when a phone number is selected.

Displaying the button assignment

Use a finger to touch the buttons. Do not wear gloves or use objects.

The key assignment is displayed at the top edge of the screen.

- To display short information: touch the button.
- ▶ To display detailed information: touch the button for an extended period.

Deleting the button assignments

- Press buttons 1 and 8 simultaneously for approx. five seconds.
- 2. "OK"

Entering letters and numbers

General information

- Turn the controller: select letters or numbers.
- Select additional letters or numbers if needed.
- 3. "OK": confirm the entry.

Depending on the menu, you can switch between entering upper and lower case, letters and numbers:

Symbol Function I ← Press the controller: delete the letter or number. I ← Press the controller for an extended period: delete all letters or numbers.

Switching between cases, letters and numbers

Depending on the menu, you can switch between entering upper and lower case, letters and numbers:

Symbol	Function
A ^B C	Enter the letters.
1 [@] +	Enter the numbers.
abc or ABC	Move the controller up.

Without navigation system

Entry comparison

Entry of names and addresses: the selection is narrowed down every time a letter is entered and letters may be added automatically.

The entries are continuously compared to the data stored in the vehicle.

- Only those letters are offered during the entry for which data is available.
- Destination search: town/city names can be entered using the spelling of language available on the Control Display.

Voice activation system

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

The concept

- Most functions that are displayed on the Control Display can be operated by spoken commands via the voice activation system. The system prompts you to make your entries.
- Functions that can only be used when the vehicle is stationary cannot be operated using the voice activation system.
- The system uses a special microphone on the driver's side.
- Verbal instructions in the Owner's Manual to use with the voice activation system.

Requirements

Via the Control Display, set a language that is also supported by the voice activation system so that the spoken commands can be identified.

Set the language, refer to page 88.

Using voice activation

Activating the voice activation system

- 2. Wait for the signal.
- Say the command.The command is displayed in the instrument cluster.

(nt) This symbol in the instrument cluster indicates that the voice activation system is active.

If no other commands are available, operate the function in this case via iDrive.

Terminating the voice activation system

Briefly press the button on the steering wheel or Cancek.

Possible commands

Most menu items on the Control Display can be voiced as commands.

The available commands depend on which menu is currently displayed on the Control Display.

Short commands exist for many functions.

Some list entries, e.g., Phone book entries, can also be selected via the voice activation system. Speak these list entries exactly as they are displayed in the respective list.

Having possible commands read aloud

You can have the available commands read out loud for you: >Voice commands

For example, if the "Settings" menu is displayed, the commands for the settings are read out loud.

Executing functions using short commands

Functions on the main menu can be performed directly by means of short commands, nearly irrespective of which menu item is currently selected, e.g., Vehicle status.

List of short commands of the voice activation system, see Navigation, Entertainment, Communication Owner's Manual.

Help dialog for the voice activation system

Calling up help dialog: >Help«

Additional commands for the help dialog:

- Help with examples: information about the current operating options and the most important commands for them are announced.
- Help with voice activation: information about the principle of operation for the voice activation system is announced.

Example: playing back a CD

Via the main menu

The commands of the menu items are spoken just as they are selected via the controller.

- Switch on the Entertainment sound output if necessary.
- 2. Press the button on the steering wheel.
- Multimedia
 The medium last played is played back.
- 4. →C D<
- 5. ⇒C D drived
- 6. →Track ..., e.g., CD track 4.

Via short command

Playback of the CD can also be started via a short command.

- 1. Switch on the Entertainment sound output if necessary.
- 2. Press the button on the steering wheel.
- 3. →C D drive track ..., e.g., CD track 4.

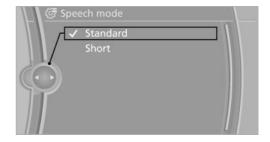

Setting the voice dialog

You can set whether the system should use the standard dialog or a shorter version.

In the shorter variant of the voice dialog, the announcements from the system are issued in an abbreviated form.

On the Control Display:

- 1. "Settings"
- 2. "Language/Units"
- 3. "Speech mode:"
- Select the setting.

Adjusting the volume

Turn the volume button while giving an instruction until the desired volume is set.

- The volume remains constant even if the volume of other audio sources is changed.
- ➤ The volume is stored for the remote control currently in use.

Notes on Emergency Requests

Do not use the voice activation system to initiate an Emergency Request. In stressful situations, the voice and vocal pitch can change. This can unnecessarily delay the establishment of a telephone connection.

Instead, use the SOS button, refer to page 182, in the vicinity of the interior mirror.

Environmental conditions

- Say the commands, numbers, and letters smoothly and with normal volume, emphasis, and speed.
- Always say commands in the language of the voice activation system.
- Keep the doors, windows, and glass sunroof closed to prevent noise interference.
- Avoid making other noise in the vehicle while speaking.

Integrated Owner's Manual in the vehicle

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Integrated Owner's Manual in the vehicle

The Integrated Owner's Manual can be displayed on the Control Display. The equipment and functions that are in the vehicle are described therein.

Components of the integrated Owner's Manual

The integrated Owner's Manual consists of three parts, which offer various levels of information or access possibilities.

Quick Reference Guide

Located in the Quick Reference is important information for the operation of the vehicle, the operation of basic vehicle functions or for what to do in the event of a flat tire. This information can also be displayed during driving.

Search by pictures

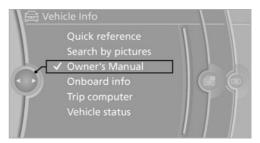

Information and descriptions based on illustrations can be searched via search by pictures. This is helpful, for example, if the description of an outfitting package that cannot be named is needed.

Owner's Manual

Information and descriptions can be searched by direct entry of a search term via the index.

Select components

- Press the button.
- 2. Turn the controller: open "Vehicle Info".
- 3. Press the controller.
- 4. Selecting desired range:
 - "Quick reference"
 - "Search by pictures"
 - "Owner's Manual"

Leafing through the Owner's Manual

Page by page with link access

Turn the controller until the next or previous page is displayed.

Page by page without link access

Leaf through the pages directly while skipping the links.

Highlight the symbol once. Now simply press the controller to leaf from page to page.

Leaf back.

Leaf forward.

Context help - Owner's Manual to the temporarily selected function

To change from a function, e.g., radio, to the Owner's Manual on the Control Display and to switch between the two displays:

- 1. Press the button or move the controller to the right repeatedly until the "Options" menu is displayed.
- 2. "Display Owner's Manual"
- Select the desired page in the Owner's Manual.
- 4. Press the button again to return to the function displayed last.
- 5. Press the button to return to the page of the Owner's Manual displayed last.

To switch back and forth repeatedly between the function displayed last and the page of the Owner's Manual displayed last, repeat steps 4 and 5. This opens a new panel every time.

Programmable memory buttons

General information

The Owner's Manual can be stored on the programmable memory buttons and called up directly.

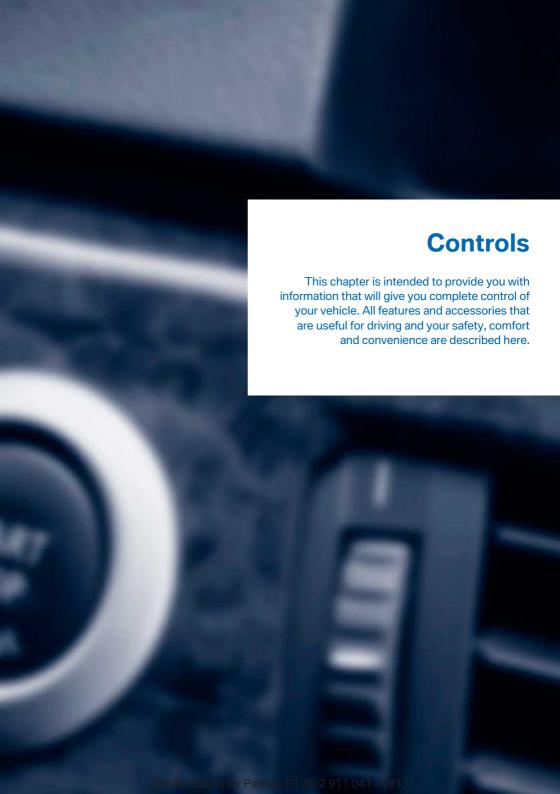

Storing

- 1. "Owner's Manual" Select via the iDrive.
- 2. Press the desired button for more than 2 seconds.

Executing

Press the button.
The Owner's Manual is displayed immediately.

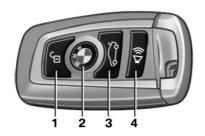

Opening and closing

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Remote control/key

Buttons on the remote control

- 1 Unlocking
- 2 Locking
- 3 Opening the tailgate
- 4 Panic mode, headl. courtesy delay feat.

General information

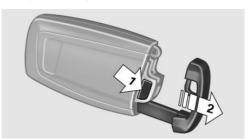

The vehicle is supplied with two remote controls with keys.

Every remote control contains a replaceable battery.

The settings called up and implemented when the car is unlocked depend on which remote control is used to unlock the car. Personal Profile, refer to page 33.

Information on the required maintenance is stored in the remote control as well. Service data in the remote control, refer to page 172

Integrated key

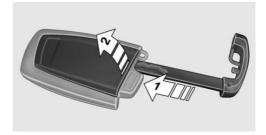

Press the button on the back of the remote control, arrow 1, and pull out the key, arrow 2.

The integrated key fits the following locks:

- Driver's door.
- ▶ Glove compartment on the front passenger side.

Replacing the battery

- Take the integrated key out of the remote control.
- 2. Push in the catch with the key, arrow 1.
- Remove the cover of the battery compartment; see arrow 2.
- 4. Insert a battery of the same type with the positive side facing upwards.
- Press the cover closed.

Take the used battery to a recycling center or to your service center.

New remote controls

You can obtain new remote controls from your service center.

Loss of the remote controls

Lost remote controls can be blocked by your service center.

Emergency detection of remote control

It is possible to switch on the ignition or start the engine in situations such as the following:

- Interference of radio transmission to remote control by external sources.
- Discharged battery in the remote control.
- Interference of radio transmission by mobile devices in close proximity to the remote control.
- Interference of radio transmission by charger while charging items such as mobile devices in the vehicle.

A Check Control message is displayed if an attempt is made to switch on the ignition or start the engine.

Starting the engine with emergency detection of the remote control

Automatic transmission: if a corresponding Check Control message appears, hold the remote control, as shown, against the marked area on the steering column and press the Start/Stop button within 10 seconds while pressing the brake.

Personal Profile

The concept

You can set several of your vehicle's functions to suit your personal needs and preferences.

- The settings are automatically saved in the profile currently activated.
- The remote control used is detected when the vehicle is unlocked and the stored profile is called up.
- Your personal settings will be recognized and called up again even if the vehicle has been used in the meantime by someone else with another remote control.

The individual settings are stored for three Personal Profiles and one guest profile.

Transmitting the settings

Your personal settings can be taken with you to another vehicle equipped with the Personal Profile function. For more information, contact your service center.

The settings are transmitted as follows:

- Via the USB interface for data transfer.
- BMW Online.

Profile management

Opening the profiles

A different profile can be called up than the one associated with the remote control currently in use.

- 1. "Settings"
- 2. "Profiles"
- 3. Select a profile.

Called up profile is assigned to the remote control being used at the time.

Renaming profiles

- 1. "Settings"
- "Profiles"

The current profile is selected.

- Open "Options".
- 4. "Rename current profile"

Resetting profiles

The settings of the active profile are reset to their default values.

- 1. "Settings"
- 2. "Profiles"

The current profile is selected.

- 3. Open "Options".
- 4. "Reset current profile"

Importing profiles

Existing settings and contacts are overwritten with the imported profile.

- 1. "Settings"
- 2. "Profiles"
- 3. "Import profile"
- BMW Online: "BMW Online" USB interface: "USB device"

Exporting profiles

Most settings of the active profile and the saved contacts can be exported.

This can be helpful for securing and retrieving personal settings, before delivering the vehicle to a workshop for example.

- 1. "Settings"
- "Profiles"
- "Export profile"
- BMW Online: "BMW Online" USB interface: "USB device"

Using the guest profile

The guest profile can be used to make individual settings without affecting the three Personal Profiles.

This can be useful for drivers who are using the vehicle temporarily and do not have their own profile.

- 1. "Settings"
- 2. "Profiles"

The current profile is selected.

- 3. Open "Guest".
- 4. Create the settings.

Note: the guest profile cannot be renamed.

Display profile list during start

The profile list can be displayed during each start for selecting the desired profile.

- 1. "Settings"
- 2. "Profiles"
- 3. Open "Options".
- 4. "Display user list at startup"

Personal Profile settings

The following functions and settings can be stored in a profile.

- Collision warning: warning time.
- Exterior mirror position.
- ▷ CD/Multimedia: audio source listened to last.
- Unlocking/locking of the vehicle: settings.
- Driving Dynamics Control: sport program
- Driver's seat position: automatically retrieved after unlocking.
- Programmable memory buttons: assignment.
- ► Head-up Display: selection, brightness, position and rotation of the display.
- Headlamp courtesy delay feature: time setting.
- ▶ Tone: tone settings.
- Automatic climate control/Automatic climate control with enhanced features: settings.

- Navigation: map views, route criteria, voice output on/off.
- Park Distance Control PDC: adjusting the signal tone volume.
- Radio: stored stations, station listened to last, special settings.
- Rearview camera: selection of functions and type of display.
- Language on the Control Display.
- Lane departure warning: last setting, on/ off.
- Daytime running lights: current setting.
- Triple turn signal activation.
- Locking the vehicle: after a brief period or after starting to drive.

Central locking system

The concept

The central locking system becomes active when the driver's door is closed.

The system simultaneously engages and releases the locks on the following:

- Doors.
- Tailgate.
- ▶ Fuel filler flap.

Operating from the outside

- Via the remote control.
- Via the door handles of the driver's and front passenger doors.
- Via the button on the tailgate.

The following takes place simultaneously when locking/unlocking the vehicle via the remote control:

Depending on how the vehicle is equipped, the theft protection is activated/deactivated. Theft protection prevents the doors from being unlocked using the lock buttons or the door opener.

- The welcome lamps, interior lamps and courtesy lamps are switched on and off.
- The alarm system, refer to page 43, is armed or disarmed.

Operating from the inside

Via the button for the central locking system.

If the vehicle has been locked from inside, the fuel filler flap remains unlocked.

If an accident of a certain severity occurs, the central locking system unlocks automatically.

The hazard warning system and interior lamps come on.

Opening and closing: from the outside

Using the remote control

General information

Take the remote control with you
People or animals left unattended in a
parked vehicle can lock the doors from the inside. Always take the remote control with you
when leaving the vehicle so that the vehicle
can then be opened from the outside.

✓

Unlocking

Press the button on the remote control

The vehicle is unlocked.

Welcome lamps, interior lamp and courtesy lamps are switched on.

You can set how the vehicle is to be unlocked. Create the settings, refer to page 42.

Convenient opening

The remote control can be used to simultaneously open the windows and the glass sunroof.

Press and hold the button on the remote control.

The windows and the glass sunroof open. Releasing the button stops the motion.

Locking

Press the button on the remote control.

Locking from the outside

Do not lock the vehicle from the outside if there are people in it, as the vehicle cannot be unlocked from inside without special knowledge.

Switching on interior lamps and courtesy lamps

Press the button on the remote control with the vehicle locked.

Panic mode

You can trigger the alarm system if you find yourself in a dangerous situation.

Press the button on the remote control for at least 3 seconds.

To switch off the alarm: press any button.

Switching on the headlamp courtesy delay feature

Briefly press the button on the remote control.

The duration can be set.

Opening the tailgate

Press the button on the remote control for approx. 1 second.

The tailgate opens, regardless of whether it was previously locked or unlocked.

The tailgate pivots back and up when it opens. Ensure that adequate clearance is available before opening.

In some vehicle equipment variants, the tailgate can only be opened using the remote control if the vehicle has been unlocked.

Do not place the remote control in the cargo area

Take the remote control with you and do not leave it in the cargo area; otherwise, the remote control is locked inside the vehicle when the tailgate is closed.◀

The tailgate is locked again as soon as it is pushed closed.

Provide edge protection

Sharp or angular objects can hit the rear window while driving and damage the heating wires of the rear window. Provide edge protection.

Malfunction

If the vehicle can no longer be locked or unlocked with the remote control, the battery may be discharged or there may be interference from external sources such as mobile phones, metal objects, overhead power lines, transmission towers, etc.

If this occurs, lock or unlock the driver's door at the door lock using the integrated key.

For US owners only

The transmitter and receiver units comply with part 15 of the FCC/Federal Communication Commission regulations. Operation is governed by the following:

FCC ID:

- I X8766S.
- ▶ LX8766E.
- LX8CAS.
- LX8CAS2.
- MYTCAS4.

Compliance statement:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modifications or changes to these devices could void the user's authority to operate this equipment.

Using the door lock

General information

Locking from the outside

Do not lock the vehicle from the outside
if there are people in it, as the vehicle cannot
be unlocked from inside without special knowledge.

lack

Remove the key before pulling the door handle

Before pulling the outside door handle, remove the key to avoid damaging the paintwork and the key. ◀ The alarm system is triggered when the door is opened, if the vehicle is unlocked via the door lock.

In order to terminate this alarm, unlock vehicle with the remote control or switch on the ignition, if necessary, by emergency detection of the remote control.

Only the driver's door is unlocked or locked via the door lock.

Locking the doors and tailgate together

To lock all doors and the tailgate at once:

- With the doors closed, lock the vehicle using the button for the central locking system in the interior.
- 2. Unlock and open the driver's or front passenger door.
- 3. Lock the vehicle.
 - Lock the driver's door using the integrated key in the door lock, or
 - Press down the lock button of the front passenger door and close the door from the outside.

The fuel filler flap can only be locked using the remote control.

Manual operation

If an electrical malfunction occurs, lock or unlock the vehicle using the integrated key via the door lock on the driver's door.

Opening and closing: from the inside

Locking and unlocking

Pressing the buttons locks and unlocks the doors and the tailgate when the front doors are closed, but they are not secured against theft.

The fuel filler flap remains unlocked.

Unlocking and opening

- Either unlock the doors together using the button for the central locking system and then pull the door handle above the armrest or
- Pull the door opener twice individually on each door: the first time unlocks the door, the second time opens it.

Tailgate

Opening

The tailgate pivots back and up when it opens. Ensure that adequate clearance is available before opening.

Provide edge protection
Sharp or angular objects can hit the rear window while driving and damage the heating wires of the rear window. Provide edge protection.

Opening from the outside

- Press the button next to the tailgate.
- Press the button on the remote control for approx. 1 second.

Opening from the inside

Push the button in the driver's foot-

The tailgate is opened if the vehicle is stationary, provided that the tailgate has not been locked.

Closing

Recessed grips on the inside trim of the tailgate can be used to conveniently pull down the tailgate.

Make sure that the closing path of the tailgate is clear; otherwise, injuries may result. ◀

Do not place the remote control in the cargo area

Take the remote control with you and do not leave it in the cargo area; otherwise, the remote control is locked inside the vehicle when the tailgate is closed.◀

Locking the vehicle

Press the button on the inside of the tailgate. When the driver's door is closed, the vehicle is completely locked.

Automatic tailgate operation

Adjusting the opening height

You can set how far the tailgate should open.

Adjusting the opening height
When adjusting the opening height, ensure that there is a clearance of at least
4 in/10 cm above the tailgate. Otherwise, the ceiling may not be high enough for the open tailgate if the load situation changes.

- "Settings"
- 2. "Tailgate"
- 3. Turn the controller until the desired opening height is selected.

Opening

The tailgate opens fully.

- Press the button on the exterior of the tailgate.

Press the button on the remote control for approx. 1 second.

Push the button in the driver's footwell.

The tailgate is opened if the vehicle is stationary, provided that the tailgate has not been locked.

Pressing the button again stops the motion.

The opening process is interrupted as well:

- When starting the engine.
- When the vehicle starts moving.
- By pressing the button in the driver's footwell.
- By pressing the button on the inside of the tailgate.

Provide edge protection
Sharp or angular objects can hit the rear window while driving and damage the heating wires of the rear window. Provide edge protection.

Closing

Without Comfort Access:

Press the button on the inside of the tailgate.

The tailgate closes automatically.

Pressing the button again stops the motion.

With Comfort Access:

Press the button, arrow 1, on the inside of the tailgate.

The tailgate closes automatically.

Pressing the button again stops the motion.

▶ Press the button, arrow 2.

Tailgate closes automatically and the vehicle is locked.

Press the button on the exterior of the tailqate.

Pressing the button again stops the motion.

The closing operation is interrupted:

- When starting the engine.
- The vehicle starts off with jerks.

Keep the closing path clear
Make sure that the closing path of the tailgate is clear; otherwise, injuries may result.

✓

Do not place the remote control in the cargo area

Take the remote control with you and do not leave it in the cargo area; otherwise, the remote control is locked inside the vehicle when the tailgate is closed.◀

Manual operation

In the event of an electrical malfunction, operate the unlocked tailgate manually with a slow and smooth motion.

Do not operate the tailgate manually if it is blocked

If the tailgate is blocked, do not operate it manually as the tailgate may otherwise become damaged and injury may result.

Contact your service center. ◀

Comfort Access

The concept

The vehicle can be accessed without activating the remote control.

All you need to do is to have the remote control with you, e.g., in your jacket pocket.

The vehicle automatically detects the remote control when it is nearby or in the passenger compartment.

Comfort Access supports the following functions:

- Unlocking/locking of the vehicle.
- Convenient closing.
- Unlocking of the tailgate separately.
- Start the engine.

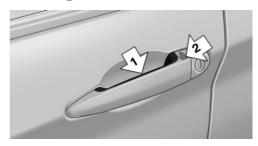

Functional requirements

- There are no external sources of interference nearby.
- ➤ To lock the vehicle, the remote control must be located outside of the vehicle.
- The next unlocking and locking cycle is not possible until after approx. 2 seconds.
- The engine can only be started if the remote control is inside the vehicle.

Comparison with ordinary remote control

The functions can be controlled by pressing the buttons of the remote control or Comfort Access.

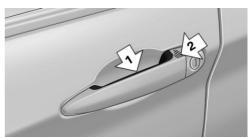

Unlocking

Grasp the door handle on the driver's or front passenger door completely, arrow 1.

This corresponds to pressing the \mathbf{n} button on the remote control.

Locking

Press the area on the door handle, arrow 2, with your finger for approx. 1 second.

This corresponds to pressing the **3** button on the remote control.

To save battery power, ensure that the ignition and all electronic systems and/or power consumers are switched off before locking the vehicle.

Convenient closing

Press the area on the door handle, arrow 2, with the finger and hold it down.

In addition to locking, the windows and the glass sunroof are closed.

Monitor the closing process
Monitor the closing process to ensure
that no one becomes trapped.

◄

Unlocking the tailgate separately

Press the button on the exterior of the tailgate.

This corresponds to pressing the button on the remote control.

Do not place the remote control in the cargo area

Take the remote control with you and do not leave it in the cargo area; otherwise, the remote control is locked inside the vehicle when the tailgate is closed.◀

Malfunction

Comfort Access may not function properly if it experiences interference from external sources such as mobile phones, metal objects, overhead power lines, transmission towers, etc.

In this case, open or close the vehicle using the buttons on the remote control or use the integrated key in the door lock.

Adjusting

Unlocking

The setting is stored for the remote control currently in use.

- 1. "Settings"
- 2. "Doors/key"
- 3. f Select symbol or "Unlock button:".
- 4. Select the desired function:
 - "Driver's door only"
 Only the driver's door and the fuel filler flap are unlocked. Pressing again unlocks the entire vehicle.
 - "All doors"
 The entire vehicle is unlocked.

Depending on how the vehicle is equipped or the country-specific variant, you can set whether the doors are also unlocked with the button on the remote control.

Confirmation signals from the vehicle

- 1. "Settings"
- 2. "Doors/kev"
- Deactivate or activate the desired confirmation signals.
 - "Acoustic sig. lock/unlock"
 - "Flash when lock/unlock"

Automatic locking

The setting is stored for the remote control currently in use.

- "Settings"
- 2. "Doors/key"
- 3. Select the desired function:
 - "Lock if no door opened"
 The vehicle locks automatically after a short period of time if a door is not opened.
 - "Lock after start driving"
 The vehicle locks automatically after you drive away.

Retrieving the seat and mirror settings

The driver's seat and exterior mirror positions used last are stored for the remote control currently in use.

When the vehicle is unlocked, these positions are automatically retrieved if this function was activated.

Pinch hazard when moving back the seat If this function is used, first make sure that the footwell behind the driver's seat is empty. Otherwise, people can be injured or objects damaged when the seat is moved back.

The adjustment procedure is interrupted:

- When a seat position switch is pressed.
- When a button of the seat and mirror memory is pressed.

Activating the setting

- 1. "Settings"
- 2. "Doors/key"
- 3. "Last seat position autom."

Alarm system

The concept

The vehicle alarm system responds to:

- Opening of a door, the hood or the tailgate.
- Movements in the vehicle.
- Changes in the vehicle tilt, e.g., during attempts to steal a wheel or when towing the car.
- Interruptions in battery voltage.

The alarm system briefly indicates tampering:

- By sounding an acoustic alarm.
- By switching on the hazard warning system
- By flashing the high beams.

Arming and disarming the alarm system

General information

When you lock or unlock the vehicle, either with the remote control or via the Comfort Access at the door lock, the alarm system is armed or disarmed at the same time.

Door lock and armed alarm system

The alarm system is triggered when the door is opened, if the vehicle is unlocked via the door lock.

In order to terminate this alarm, unlock vehicle with the remote control or switch on the igni-

tion, if necessary, by emergency detection of the remote control.

Tailgate and armed alarm system

The tailgate can be opened even when the alarm system is armed.

Press the button on the remote control for approx. 1 second.

After the tailgate is closed, it is locked and monitored again if the doors are locked. The hazard warning system flashes once.

In some vehicle equipment variants, the tailgate can only be opened using the remote control if the vehicle was unlocked first.

Panic mode

You can trigger the alarm system if you find yourself in a dangerous situation.

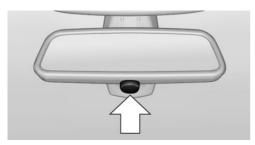

Press the button on the remote control for at least 3 seconds.

To switch off the alarm: press any button.

Switching off the alarm

- Unlock the vehicle using the remote control.
- With Comfort Access: If you are carrying the remote control with you, pull on the driver side or front passenger side door handle.

Indicator lamp on the interior rearview mirror

The indicator lamp flashes briefly every 2 seconds:

The system is armed.

The indicator lamp flashes after locking: The doors, hood or tailgate is not closed properly, but the rest of the vehicle is secured.

After 10 seconds, the indicator lamp flashes continuously. Interior motion sensor and tilt alarm sensor are not active.

The indicator lamp goes out after unlocking:

The vehicle has not been tampered with.

The indicator lamp flashes after unlocking until the engine ignition is switched on, but no longer than approx. 5 minutes:

An alarm has been triggered.

Tilt alarm sensor

The tilt of the vehicle is monitored.

The alarm system responds in situations such as attempts to steal a wheel or when the car is towed.

Interior motion sensor

The windows and glass sunroof must be closed for the system to function properly.

Avoiding unintentional alarms

The tilt alarm sensor and interior motion sensor can be switched off together, such as in the following situations:

- ▶ In automatic car washes.
- In duplex garages.
- During transport on car-carrying trains, at sea or on a trailer.
- When animals are to remain in the vehicle.

Switching off the tilt alarm sensor and interior motion sensor

The indicator lamp lights up for approx. 2 seconds and then continues to flash.

The tilt alarm sensor and interior motion sensor are switched off until the vehicle is locked again.

Power windows

General information

Take the remote control with you Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the power windows and injure themselves.

Opening

Press the switch to the resistance point.

The window opens while the switch is held.

Press the switch beyond the resistance point.

The window opens automatically.

Pressing the switch again stops the motion.

Convenient opening, refer to page 36, via the remote control.

Closing

Monitor the closing path clear
Monitor the closing process and make

✓

Pull the switch to the resistance point.

The window closes while the switch is held.

Pull the switch beyond the resistance point.

The window closes automatically.

Pressing the switch stops the motion.

Convenient closing, refer to page 41, with Comfort Access.

Pinch protection system

If the closing force exceeds a specific value as a window closes, the closing action is interrupted.

The window reopens slightly.

Danger of pinching even with pinch protection

Even with the pinch protection system, check that the window's closing path is clear; other-

wise, the closing action may not stop in certain situations, e.g., if thin objects are present. ◀

No window accessories

Do not install any accessories in the range of movement of the windows; otherwise, the pinch protection system will be impaired.◄

Closing without the pinch protection system

Monitor the closing path clear
Monitor the closing process and make
sure that the closing path of the window is
clear; otherwise, injuries may result.◄

For example, if there is an external danger or if ice on the windows prevents a window from closing normally, proceed as follows:

- 1. Pull the switch past the resistance point and hold it there.
 - The pinch protection is limited and the window reopens slightly if the closing force exceeds a certain value.
- Pull the switch past the resistance point again within approx. 4 seconds and hold it there.

The window closes without pinch protection.

Safety switch

The safety switch in the driver's door can be used to prevent children, for example, from opening and closing the rear windows using the switches in the rear.

Switching on and off

Press the button.

The LED lights up if the safety function is switched on.

Safety switch for rear operation
Press the safety switch when transporting children in the rear; otherwise, injury may result if the windows are closed without supervision.

✓

Roller sunblinds

Roller sunblinds for the rear side windows

Pull out the roller sunblind at the loop and hook it onto the bracket.

Do not open the window while the roller supplied is raised.

Do not open the window while the roller sunblind is raised; otherwise, there is a risk of damage at high speeds that may result in personal injury.

Panoramic glass sunroof

General information

The glass sunroof and the sliding visor can be operated together or separately, using the same switch.

The glass sunroof is operational when the ignition is switched on.

Keep the closing path clear

Monitor the closing process and make
sure that the closing path of the glass sunroof
is clear; otherwise, injuries may result.

✓

Take the remote control with you Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the roof and injure themselves.◀

Tilting the glass sunroof

Push switch upward briefly.

- The closed roof is tilted and the sliding visor opens slightly.
- The opened roof closes until it is in its tilted position. The sliding visor stays completely open.

Opening/closing the sliding visor

- Press the switch in the desired direction to the resistance point and hold it there.
 - The sliding visor moves while the switch is being held.
- Press the switch in the desired direction past the resistance point.
 - The sliding visor moves automatically. Pressing the switch again stops the motion.

Opening/closing the glass sunroof

When the sliding visor is open, proceed as described under Sliding visor.

Opening/closing the glass sunroof and sliding visor together

Briefly press the switch twice in succession in the desired direction past the resistance point.

The glass sunroof and sliding visor move together. Pressing the

switch again stops the motion.

Convenient operation, refer to page 36, via the remote control.

Convenient closing, refer to page 41, with Comfort Access.

Comfort position

Stops the roof in the comfort position if the roof is not fully open. This reduces wind noise in the passenger compartment.

If desired, continue the movement by pressing the switch.

Pinch protection system

If the closing force when closing the glass sunroof exceeds a certain value, the closing movement is stopped, beginning at approximately the middle of the opening in the roof, or from the tilted position during closing.

The glass sunroof opens again slightly.

Danger of pinching even with pinch protection

Despite the pinch protection system, check that the roof's closing path is clear; otherwise, the closing action may not be interrupted in certain extreme situations, such as when thin objects are present.◀

Closing from the open position without pinch protection

For example, if there is an external danger, proceed as follows:

Press the switch forward beyond the resistance point and hold.

- Pinch protection is limited and the roof reopens slightly if the closing force exceeds a certain value.
- Press the switch forward again beyond the resistance point and hold until the roof closes without pinch protection.

Closing from the raised position without pinch protection

If there is an external danger, push the switch forward past the resistance point and hold it.

The roof closes without pinch protection.

Initializing after a power failure

After a power failure during the opening or closing process, the roof can only be operated to a limited extent.

Initializing the system

The system can be initialized when the vehicle is stationary and the engine is running.

During the initialization, the roof closes without pinch protection.

Keep the closing path clear

Monitor the closing process and make
sure that the closing path of the glass sunroof
is clear; otherwise, injuries may result.

✓

Press the switch up and hold it until the initialization is complete:

- Initialization begins within 15 seconds and is completed when the sunroof and sliding visor are completely closed.
- ▶ The roof closes without pinch protection.

Adjusting

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Sitting safely

The ideal seating position can make a vital contribution to relaxed, fatigue-free driving.

The seating position plays an important role in an accident in combination with:

- Safety belts, refer to page 51.
- Head restraints, refer to page 52.
- Airbags, refer to page 94.

Seats

General information

Do not adjust the seat while driving
Do not adjust the driver's seat while driving, or the seat could respond with unexpected
movement and the ensuing loss of vehicle
control could lead to an accident.

■

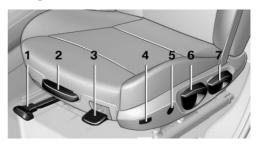

Do not incline the backrest too far to the rear

Also on the front passenger side, do not incline the backrest on the front passenger side too far to the rear during driving, or there is a risk of slipping under the safety belt in the event of an accident. This would eliminate the protection normally provided by the belt.◀

The vehicle has five seats, each of which is equipped with a safety belt.

Number of safety belts

Your vehicle has been fitted with five safety belts for the safety of you and your passengers. However, they can only offer protection when adjusted correctly.

Hints

Always make sure that safety belts are being worn by all occupants before driving away.

Although airbags enhance safety by providing added protection, they are not a substitute for safety belts.

- The shoulder strap's anchorage point will be correct for adult seat occupants of every build if the seat is correctly adjusted.
- The two outer safety belt buckles, integrated into the rear seat, are for passengers sitting on the left and right.
- ➤ The center rear seat belt buckle is solely intended for the center passenger.

Never allow more than one person to wear a single safety belt. Never allow infants or small children to ride on a passenger's lap. ◀

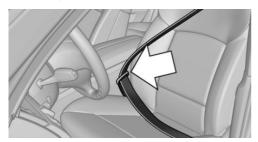

Putting on the belt

Lay the belt, without twisting, snugly across the lap and shoulders, as close to the body as possible. Make sure that the belt lies low around the hips in the lap area and does not press on the abdomen. Otherwise, the belt can slip over the hips in the lap area in a frontal impact and injure the abdomen.

The safety belt must not lie across the neck, rub on sharp edges, be routed over solid or breakable objects, or be pinched. ◄

Avoid wearing clothing that prevents the belt from fitting properly, and pull the shoulder belt periodically to readjust the tension across your lap; otherwise, the retention effect of the safety belt may be reduced.

Buckling the belt

Make sure you hear the latch plate engage in the belt buckle.

Unbuckling the belt

- 1. Hold the belt firmly.
- 2. Press the red button in the belt buckle.
- Guide the belt back into its reel.

Safety belt reminder for driver's and passenger's seat

The indicator lamp flashes or lights up and a signal sounds. Make sure that the safety belts are positioned cor-

rectly. The safety belt reminder is active at

speeds above approx. 5 mph/8 km/h. It can also be activated if objects are placed on the front passenger seat.

Damage to safety belts

In the case of strain caused by accidents or damage:

Have the safety belts, including the safety belt tensioners, replaced and have the belt anchors checked.

Checking and replacing safety belts
Have the work performed only by your
service center; otherwise, it cannot be ensured
that this safety feature will function properly.

Head restraints in the front

Correctly adjusted head restraint

A correctly adjusted head restraint reduces the risk of injury to cervical vertebrae in the event of an accident.

Adjusting the head restraint

Correctly adjust the head restraints of all occupied seats; otherwise, there is an increased risk of injury in an accident.

✓

Height

Adjust the head restraint so that its center is approximately at ear level.

Distance

Adjust the distance so that the head restraint is as close as possible to the back of the head. If necessary, adjust the distance by adjusting

the tilt of the backrest.

Active head restraint

In the event of a rear-end collision with a certain severity, the active head restraint automatically reduces the distance from the head.

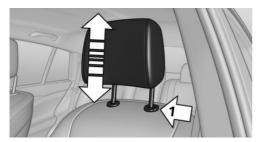

Reduced protective function

- Do not use seat or head restraint covers.
- Do not hang objects, e.g., clothes hangers, on the head restraints.
- Only attach accessories approved by BMW to the seat or head restraint.

Otherwise, the protective function of the active head restraint will be impaired and the personal safety of the occupants will be endangered.◀

Adjusting the height

- To raise: pull.
- ➤ To lower: press the button, arrow 1, and push the head restraint down.

Removing

The head restraints cannot be removed.

Rear head restraints

Correctly adjusted head restraint

A correctly adjusted head restraint reduces the risk of injury to cervical vertebrae in the event of an accident.

Adjusting the head restraint

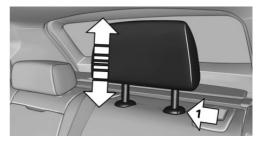

Correctly adjust the head restraints of all occupied seats; otherwise, there is an increased risk of injury in an accident.

✓

Height

Adjust the head restraint so that its center is approximately at ear level.

Adjusting the height

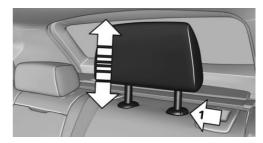

- ▶ To raise: pull.
- ➤ To lower: press the button, arrow 1, and push the head restraint down.

The center head restraint cannot be adjusted in elevation.

Removing

Only remove the head restraint if no one will be sitting in the seat in question.

- Pull the head restraint upward as far as possible.
- 2. Press the button, arrow 1, and pull the head restraint out completely.

Before transporting passengers
Reinstall the head restraint before transporting anyone in the seat; otherwise, the protective function of the head restraint is unavailable.

Seat and mirror memory

General information

Two different driver's seat and exterior mirror positions can be stored and retrieved for each remote control. Settings for the backrest width and lumbar support are not stored in memory.

Storing

- 1. Switch on the ignition.
- 2. Set the desired position.
- 3. Press the button. The LED in the button lights up.
- 4. Press the desired button 1 or 2. The LED goes out.

If the M button is pressed accidentally:

Press the button again.

The LED goes out.

Calling up settings

Do not retrieve the memory while driving Do not retrieve the memory setting while driving, as an unexpected movement of the seat or steering wheel could result in an accident.

Comfort function

- 1. Open the driver's door.
- 2. Switch off the ignition.
- 3. Briefly press the desired button 1 or 2.

The corresponding seat position is performed automatically.

The procedure stops when a switch for adjusting the seat or one of the buttons is pressed.

Safety mode

- Close the driver's door or switch on the ignition.
- Press and hold the desired button 1 or 2 until the adjustment procedure is completed.

Calling up of a seat position deactivated

After a brief period, the calling up of stored seat positions is deactivated to save battery power.

To reactivate calling up of a seat position:

- Open or close the door or tailgate.
- Press a button on the remote control.
- Press the Start/Stop button.

Mirrors

Exterior mirrors

At a glance

- 1 Adjusting
- 2 Left/right, Automatic Curb Monitor
- 3 Fold in and out

General information

The mirror on the passenger side is more curved than the driver's side mirror.

Estimating distances correctly
Objects reflected in the mirror are closer
than they appear. Do not estimate the distance
to the traffic behind you based on what you
see in the mirror, as this will increase your risk
of an accident.◄

Depending on how the vehicle is equipped, the mirror setting is stored for the remote control in use. When the vehicle is unlocked via the remote control, the position is automatically retrieved if the setting for this function is active.

Selecting a mirror

To change over to the other mirror: Slide the mirror changeover switch.

Adjusting electrically

The setting corresponds to the direction in which the button is pressed.

Saving positions

Seat and mirror memory, refer to page 54

Adjusting manually

If an electrical malfunction occurs, for example, press the edges of the mirror glass.

Automatic Curb Monitor

When the reverse gear is engaged, the mirror glass tilts downward slightly on the front passenger side. This improves your view of the curb and other low-lying obstacles when parking, for example.

Activating

- 1. Slide the mirror changeover switch to the driver's side mirror position.
- 2. Engage transmission position R.

Deactivating

Slide the mirror changeover switch to the passenger's side mirror position.

Fold in and out

Press the button.

Possible up to approx. 15 mph/20 km/h.

For example, this is advantageous

- In car washes.
- In narrow streets.
- For folding back mirrors that were folded away manually.

Mirrors that were folded in are folded out automatically at a speed of approx. 25 mph/40 km/h.

Fold in the mirror in a car wash
Before washing the car in an automatic
car wash, fold in the exterior mirrors by hand or
with the button; otherwise, the mirrors could
be damaged, depending on the width of the
vehicle.

Automatic heating

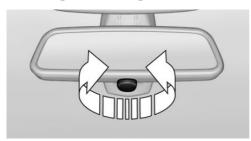

Both exterior mirrors are automatically heated whenever the engine is running.

Automatic dimming feature

Both exterior mirrors are automatically dimmed. Photocells are used for control in the Interior rear view mirror, refer to page 56.

Interior rearview mirror

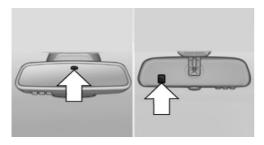

Reducing the blinding effect

Turn the knob to reduce the blinding effect by the interior mirror.

Interior rearview mirror, automatic dimming feature

The concept

Photocells are used for control:

- In the mirror glass.
- On the back of the mirror.

Functional requirement

For proper operation:

- Keep the photocells clean.
- Do not cover the area between the inside rearview mirror and the windshield.

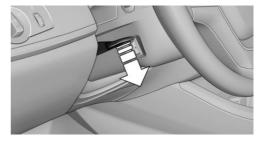

Steering wheel

General information

Do not adjust while driving
Do not adjust the steering wheel while
driving; otherwise, an unexpected movement
could result in an accident.

◀

Adjusting

- Fold the lever down.
- Move the steering wheel to the preferred height and angle to suit your seating position.
- Fold the lever back.

Steering wheel heating

Switching on/off

Press the button.

- ▷ On: the LED lights up.
- Off: the LED goes out.

Transporting children safely

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

The right place for children

Note

Children in the vehicle
Do not leave children unattended in the vehicle; otherwise, they could endanger themselves and other persons, e.g., by opening the doors.

Children should always be in the rear

Accident research shows that the safest place for children is in the back seat.

Transporting children in the rear
Only transport children younger than
13 years of age or shorter than 5 ft/150 cm in
the rear in child restraint fixing systems provided in accordance with the age, weight and
size of the child; otherwise, there is an increased risk of injury in an accident.

Children 13 years of age or older must wear a safety belt as soon as a suitable child restraint fixing system can no longer be used, due to their age, weight and size.◀

Children on the front passenger seat

Should it ever be necessary to use a child restraint fixing system in the front passenger seat, make sure that the front, knee and side airbags on the front passenger side are deactivated. Automatic deactivation of front passenger side airbags, refer to page 96.

Note

Deactivated front passenger airbags
If a child restraint fixing system is used in
the front passenger seat, the front passenger
airbags must be deactivated; otherwise, there
is an increased risk of injury to the child when
the airbags are triggered, even with a child restraint fixing system.

Installing child restraint fixing systems

Before mounting

Before mounting child restraint fixing systems, ensure that the rear seat backrests are locked.

Hints

Manufacturer's information for child restraint fixing systems

To select, mount and use child restraint fixing systems, observe the information provided by the system manufacturer; otherwise, the protective effect can be impaired.◀

Lock the rear seat backrests in position
Before installing a child restraint system,
make sure that the rear seat backrests are
locked; otherwise, the protective effect is not
guaranteed and there is an increased risk of injury for the child in the event of an accident.

On the front passenger seat

Deactivating airbags

After installing a child restraint fixing system in the front passenger seat, make sure that the

front, knee and side airbags on the front passenger side are deactivated.

Deactivate the front passenger airbags automatically, refer to page 96.

Deactivating the front passenger airbags If a child restraint fixing system is used in the front passenger seat, the front passenger airbags must be deactivated; otherwise, there is an increased risk of injury to the child when the airbags are triggered, even with a child restraint fixing system.

Seat position and height

Before installing a child restraint fixing system, move the front passenger seat as far back as possible and adjust its height to the highest position to obtain the best possible position for the belt and to offer optimal protection in the event of an accident.

Do not change the seat position and height after this.

Backrest width

Adjustable backrest width: before installing a child restraint fixing system in the front passenger seat, open the backrest width completely. Do not change the backrest width again and do not call up a memory position.

Backrest width for the child seat
Before installing a child restraint fixing
system in the front passenger seat, the backrest width must be opened completely. Do not
change the adjustment after this; otherwise,
the stability of the child seat will be reduced.

Child seat security

The rear safety belts and the front passenger safety belt can be locked against pulling out for mounting the child restraint fixing systems.

Locking the safety belt

- 1. Pull out the belt webbing completely.
- Secure the child restraint fixing system with the belt.
- Allow the belt webbing to be pulled in and pull it taut against the child restraint fixing system. The safety belt is locked.

Unlocking the safety belt

- 1. Unbuckle the belt buckle.
- 2. Remove the child restraint fixing system.
- Allow the belt webbing to be pulled in completely.

LATCH child restraint fixing system

LATCH: Lower Anchors and Tether for CHildren.

Note

Manufacturer's information for LATCH child restraint fixing systems

To mount and use the LATCH child restraint fixing systems, observe the operating and safety information from the system manufacturer; otherwise, the level of protection may be reduced. ◄

Mounts for the lower LATCH anchors

The lower anchors may be used to attach the CRS to the vehicle seat up to a combined child and CRS weight of 65 lb/30 kg when the child is restr- ained by the internal harnesses.

Correctly engage the lower LATCH anchors

Make sure that the lower LATCH anchors have properly engaged and that the child restraint fixing system is resting snugly against the backrest; otherwise, the degree of protection offered may be reduced. ◀

Before mounting the LATCH child restraint fixing system, pull the belt away from the child restraint fixing system.

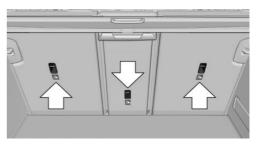

Mounts for the lower LATCH anchors are located in the gap between the seat and backrest.

Mounting ISOFIX child restraint fixing systems

- Mount the child restraint fixing system; refer to the user's manual of the system.
- Ensure that both LATCH anchors are properly connected.

Child restraint fixing system with a tether strap

Mounting points

There are three mounting points for the upper retaining strap of LATCH child restraint fixing systems.

Note

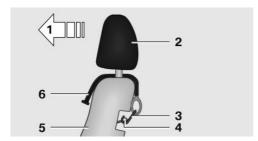

Mounting eyes

Only use the mounting eyes for the upper retaining strap to secure child restraint fixing systems; otherwise, the mounting eyes could be damaged.

Retaining strap guide

Retaining strap

Make sure that the upper retaining strap is not routed over the head restraints or sharp edges and is free of twisting on its way to the upper mounting point; otherwise, the belt cannot properly secure the child restraint fixing system in an accident.◀

- Direction of travel
- Head restraint.
- 3 Hook for upper retaining strap
- 4 Mounting point/eye
- 5 Seat backrest
- 6 Upper retaining strap

Attaching the upper retaining strap to the mounting point

- 1. Raise the head restraint if necessary.
- 2. Guide the upper retaining strap between the supports of the head restraint.
- 3. If there is a retaining strap, run it between the backrest and the cargo cover.
- 4. Attach the hooks of the retaining strap to the mounting eyes.
- Tighten the retaining strap by pulling it down.
- Lower and lock head restraints as needed.

Locking the doors and windows

Rear doors

Push the locking lever on the rear doors down.

The door can now be opened from the outside only.

Safety switch for the rear

Press the button on the driver's door if children are being transported in the

rear.

This locks various functions so that they cannot be operated from the rear: safety switch, refer to page 45.

Driving

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Start/Stop button

The concept

Pressing the Start/Stop button switches the ignition on or off and starts the engine.

Automatic transmission: The engine starts if the brake is de-

pressed while pressing the Start/Stop button.

Ignition on

Automatic transmission: Press the Start/Stop button but do not depress the brake.

All vehicle systems are ready for operation.

Most of the indicator and warning lamps in the instrument cluster light up for varying lengths of time.

To save battery power when the engine is off, switch off the ignition and any unnecessary electronic systems/power consumers.

The ignition switches off automatically:

- When locking the vehicle, even if the low beams are switched on.
- Shortly before the battery is discharged completely, so that the engine can still be started.

Note

If the engine is switched off and the ignition is switched on, the system automatically switches to the radio ready state when the door is opened if the lights are switched off or the daytime running lights are switched on.

Ignition off

Automatic transmission: Press the Start/Stop button again, but do not depress the brake.

All indicator lamps in the instrument cluster go out.

To save battery power when the engine is off, switch off the ignition and any unnecessary electronic systems/power consumers.

Transmission position P with the ignition

When the ignition is switched off, position P is engaged automatically. When in an automatic car wash, for example, ensure that the ignition is not switched off accidentally. ◀

The ignition automatically cuts off while the vehicle is stationary and the engine is stopped:

- When locking the vehicle, and when the low beams are activated.
- Shortly before the battery is discharged completely, so that the engine can still be started. This function is only available when the low beams are switched off.
- When opening or closing the driver door, if the driver's seat belt is unbuckled and the low beams are switched off.
- While the driver's seat belt is unbuckled, if the driver's door is open and the low beams are switched off.

When the ignition is switched off, by opening or closing the driver's door or unbuckling the driver's seat belt, the radio ready state remains active.

Radio ready state

Activate radio ready state:

When the engine is running: press the Start/Stop button.

Some electronic systems/power consumers remain ready for operation.

The radio ready state switches off automatically:

- After approx. 8 minutes.
- When the vehicle is locked using the central locking system.
- Shortly before the battery is discharged completely, so that the engine can still be started.

Starting the engine

Hints

Enclosed areas

Do not let the engine run in enclosed areas; otherwise, breathing of exhaust fumes may lead to loss of consciousness and death. The exhaust gases contain carbon monoxide, an odorless and colorless but highly toxic gas.◀

Unattended vehicle

Do not leave the vehicle unattended with the engine running; doing so poses a risk of danger.

Before leaving the vehicle with the engine running, set the parking brake and place the transmission in position P or neutral to prevent the vehicle from moving.◀

Repeated starting in quick succession Avoid repeated unsuccessful attempts to start the vehicle or starting the vehicle several times in quick succession. Otherwise, the fuel is not burned or is inadequately burned, posing a risk of overheating and damage to the catalytic converter. ◀

Do not wait for the engine to warm-up while the vehicle remains stationary. Start driving at moderate engine speeds.

Automatic transmission

Starting the engine

- Depress the brake pedal.
- 2. Press the Start/Stop button.

The ignition is activated automatically for a certain time and is stopped as soon as the engine starts.

Engine stop

Hints

Take the remote control with you Take the remote control with you when leaving the vehicle so that children, for example, cannot start the engine. ◄

Set the parking brake and further secure the vehicle as required

Set the parking brake firmly when parking; otherwise, the vehicle could roll. On steep upward and downward inclines, further secure the vehicle, for example, by turning the steering wheel in the direction of the curb. ◀

Before driving into a car wash

In order for the vehicle to be able to roll into a car wash, heed the information regarding Washing in automatic car washes, refer to page 187.

Automatic transmission

Switching off the engine

- 1. Engage transmission position P with the vehicle stopped.
- 2. Press the Start/Stop button. The engine is switched off.

The radio ready state is switched on.

3. Set the parking brake.

Automatic Engine Start/Stop Function

The concept

The Auto Start/Stop function helps save fuel. The system switches off the engine during a stop, e.g., in a traffic congestion or at traffic lights. The ignition remains switched on. The engine starts again automatically for driving off.

Certain vehicle components may experience additional wear as a result of this system.

Automatic mode

The Auto Start/Stop function is operational after each engine start.

This function is activated at speeds faster than about 3 mph, approx. 5 km/h.

Engine stop

The engine is switched off automatically during a stop under the following conditions:

Automatic transmission:

- The selector lever is in transmission position D.
- The brake pedal remains pressed while the vehicle is stationary or the vehicle is held by Automatic Hold.
- The driver's seat belt is buckled or the driver's door is closed.

The air volume of the air conditioner is reduced when the engine is switched off.

Displays in the instrument cluster

The display indicates that the automatic engine start-stop function is ready for an automatic engine start.

The display indicates that the conditions for an automatic engine stop have not been satisfied.

Note

The engine is not switched off automatically in the following situations:

- External temperature too low.
- The external temperature is high and automatic climate control is running.
- The passenger compartment has not yet been heated or cooled to the required level.
- The engine is not yet at operating temperature.
- ▶ The wheels are at a sharp angle or the steering wheel is being turned.
- After driving in reverse.
- Fogging of the windows when the automatic climate control is switched on.
- Vehicle battery is heavily discharged.
- ▶ The engine compartment lid is unlocked.
- HDC Hill Descent Control is activated.
- Stop-and-go traffic.
- The transmission selector lever is in position N or M/S.
- Use of fuel with high ethanol content.

Starting the engine

The engine starts automatically under the following conditions:

Automatic transmission:
 By releasing the brake pedal.

When Automatic Hold is activated: press the accelerator.

After the engine starts, accelerate as usual.

Safety mode

After the engine switches off automatically, it will not start again automatically if any one of the following conditions are met.

- ➤ The driver's safety belt is unbuckled and the driver's door is open.
- The hood was unlocked.

Some indicator lamps light up for varying lengths of time.

The engine can only be started via the Start/ Stop button.

Note

Even if driving away was not intended, the deactivated engine starts up automatically in the following situations:

- Excessive warming of the passenger compartment when the cooling function is switched on.
- ▶ The steering wheel is turned.
- ▶ Automatic transmission: the transmission position is changed from D to N, R, or M/S.
- Automatic transmission: the transmission position is changed from P to N, D, R or M/S.
- Fogging of the windows when the automatic climate control is switched on.
- Vehicle battery is heavily discharged.
- Excessive cooling of the passenger compartment when the heating is switched on.

Activating/deactivating the system manually

Using the button

Press the button.

 LED comes on: Auto Start Stop function is deactivated.

The engine is started during an automatic engine stop.

The engine can only be stopped or started via the Start/Stop button.

LED goes out: Auto Start Stop function is activated.

Switching off the vehicle during an automatic engine stop

During an automatic engine stop, the vehicle can be switched off permanently, e.g., when leaving it.

 Press the Start/Stop button. The ignition is switched off. The Auto Start/Stop function is deactivated.

Transmission position P is engaged automatically.

2. Set the parking brake.

Engine start as usual via Start/Stop button.

Automatic deactivation

In certain situations, the Auto Start/Stop function is deactivated automatically for safety reasons, such as when the driver is detected to be absent.

Malfunction

The Auto Start/Stop function no longer switches of the engine automatically. A Check Control message is displayed. It is possible to continue driving. Have the system checked.

Parking brake

The concept

The parking brake is used to prevent the vehicle from rolling when it is parked.

Setting

Pull the switch.

The LED lights up.

The indicator lamp lights up red. The parking brake is set.

Lower lamp: indicator lamp in Canadian models

Set the parking brake and further secure the vehicle as required

Set the parking brake firmly when parking; otherwise, the vehicle could roll. On steep upward and downward inclines, further secure the vehicle, for example, by turning the steering wheel in the direction of the curb. ◀

While driving

Use while driving serves as an emergency braking function:

Pull the switch and hold it. The vehicle brakes hard while the switch is being pulled.

The indicator lamp lights up red, a signal sounds and the brake lamps light up.

Lower lamp: indicator lamp in Canadian models.

If the vehicle is braked to a speed of approx. 2 mph/3 km/h, the parking brake remains set.

Releasing

With the ignition switched on:

Automatic transmission: Press the switch while the brake is pressed or

transmission position P is engaged.

The LED and indicator lamp go out.

The parking brake is released.

Automatic Release in cars with automatic transmission

For automatic release, operate the accelerator pedal.

The LED and indicator lamp go out.

Subject to the following requirements, the parking brake is automatically released by operation of the accelerator pedal:

- Engine on.
- Drive position engaged.
- Driver buckled in and doors closed.

Inadvertent operation of the accelerator pedal

Make sure that the accelerator pedal is not operated unintentionally; otherwise, the vehicle is set in motion and there is a risk of an accident. ◀

Automatic Hold

The concept

This system assists the driver by automatically setting and releasing the brake, such as when moving in stop-and-go traffic.

The vehicle is automatically held in place when it is stationary.

On inclines, the system prevents the vehicle from rolling backward when driving away.

For your safety

Under the following conditions, Automatic Hold is automatically deactivated and the parking brake is set:

- The engine is switched off.
- A door is opened and driver's safety belt is unbuckled while the vehicle is stationary.
- The moving vehicle is brought to a standstill using the parking brake.

The indicator lamp switches from green to red and the letters AUTO H go out.

Lower lamp: indicator lamp in Canadian models.

Before driving away:

- Release the parking brake manually.
- Reactivate Automatic Hold.

Leaving the vehicle with the engine running

Before leaving the vehicle with the engine running, engage position P of the automatic trans-

mission and ensure that the parking brake is set. Otherwise, the vehicle may begin to roll. ◀

Activating

This function can be activated when the driver's door is closed and the safety belt is fastened, and while driving.

Press the button.

The LED and the letters AUTO H light

up.

AUTO H

The indicator lamp lights up. Automatic Hold is activated.

Deactivating

Press the button again.

The LED and the letters AUTO H go

out.

Automatic Hold is deactivated.

If the vehicle is being held by Automatic Hold, press on the brake pedal to deactivate it.

When the parking brake is set manually, Automatic Hold is deactivated automatically.

Driving

Automatic Hold is activated: the vehicle is automatically secured against rolling after braking to a standstill.

PARK

The indicator lamp lights up green.

Step on the accelerator pedal to drive off.

The brake is released automatically.

The indicator lamp goes out.

Lower lamp: indicator lamp in Canadian models

Before driving into a car wash
Before driving into the car wash, deactivate Automatic Hold; otherwise, the parking brake will be set when the vehicle is stationary and the vehicle will no longer be able to roll.

Parking

The parking brake is automatically set if the engine is switched off while the vehicle is being held by Automatic Hold.

The indicator lamp changes from green to red.

The parking brake is not set if the engine is switched off while the vehicle is coasting to a halt. Automatic Hold is

deactivated.

Lower lamp: indicator lamp in Canadian models

Automatic Hold remains activated during the engine stop brought about by the Auto Start/ Stop function.

◄

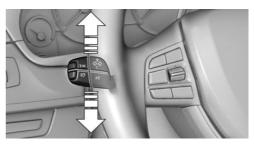

Malfunction

In the event of a failure or malfunction of the parking brake, secure the vehicle against rolling using a wheel chock, for example, when leaving it.

Turn signal, high beams, headlamp flasher

Turn signal

Using turn signals

Press the lever beyond the resistance point.

To switch off manually, press the lever to the resistance point.

Unusually rapid flashing of the indicator lamp indicates that a turn signal bulb has failed.

Triple turn signal activation

Press the lever to the resistance point.

The turn signal flashes three times.

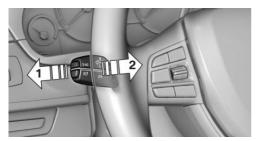

The function can be activated or deactivated:

- 1. "Settings"
- 2. "Lighting"
- "Triple turn signal"

Signaling briefly

Press the lever to the resistance point and hold it there for as long as you want the turn signal to flash.

High beams, headlamp flasher

wiper blades and the windshield wiper motor
may be damaged.

✓

No wiper operation on dry windshield Do not use the windshield wipers if the windshield is dry, as this may damage the wiper blades or cause them to become worn more quickly.◀

Switching on

Press the wiper levers up.

The lever automatically returns to its initial position when released.

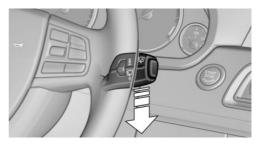

- Normal wiping speed: press up once.
 The wipers switch to intermittent operation

Switching off and brief wipe

the vehicle is stationary.

Press the wiper levers down.

The lever automatically returns to its initial position when released.

- Brief wipe: press down once.
- To switch off normal wipe: press down once.
- To switch off fast wipe: press down twice.

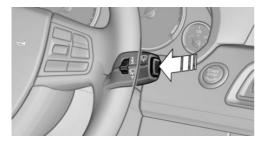

Intermittent operation or rain sensor

The concept

Without the rain sensor, the frequency of the wiper operation is preset.

The rain sensor automatically controls the time between wipes depending on the intensity of the rainfall. The sensor is located on the windshield, directly behind the interior rearview mirror.

Activating/deactivating

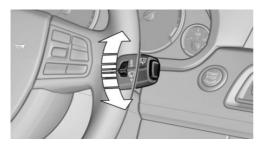

Press the button on the wiper lever.

The LED in the wiper lever lights up and a wiping operation is started. At temperatures below 32 °F/0 °C, a wiping operation is not started.

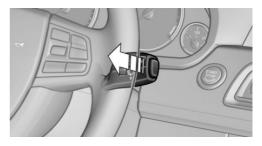

Deactivate the rain sensor in car washes
Deactivate the rain sensor when passing
through an automatic car wash; otherwise,
damage could be caused by undesired wiper
activation.

Setting the frequency or sensitivity of the rain sensor

Turn the thumbwheel.

Clean the windshield, headlamps

Pull the wiper lever.

The system sprays washer fluid on the windshield and activates the wipers briefly.

In addition, the headlamps are cleaned at regular intervals when the vehicle lights are switched on.

Do not use the washer system at freezing temperatures

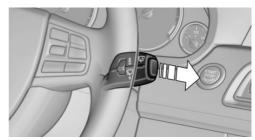

Do not use the washers if there is any danger that the fluid will freeze on the windshield; otherwise, your vision could be obscured. For this reason, use antifreeze.

Avoid using the washer when the reservoir is empty; otherwise, you could damage the pump. ◀

Windshield washer nozzles

The windshield washer nozzles are automatically heated while the ignition is switched on.

Switching on the rear window wiper

Press the wiper lever forward: intermittent wipe. When reverse gear is engaged, the system switches to continuous operation.

To clean the rear window, press the wiper lever further forward.

Fold-out position of the wipers

Required when changing the wiper blades or under frosty conditions, for example.

- 1. Switch the ignition on and off again.
- Under frosty conditions, ensure that the wiper blades are not frozen onto the windshield.
- Press the wiper lever up beyond the point of resistance and hold it for approx. 3 seconds, until the wiper remains in a nearly vertical position.

After the wipers are folded back down, the wiper system must be reactivated.

Fold the wipers back down
Before switching the ignition on, fold the wipers back down to the windshield; otherwise, the wipers may become damaged when they are switched on.

- Switch on the ignition.
- Press the wiper levers down. The wipers move to their resting position and are ready for operation.

Washer fluid

General information

Antifreeze for washer fluid
Antifreeze is flammable and can cause injury if it is used incorrectly.

Therefore, keep it away from sources of ignition.

Only keep it in the closed original container and inaccessible to children.

Follow the notes and instructions on the container.

United States: The washer fluid mixture ratio is regulated by the U.S. EPA and many individual states; do not exceed the allowable washer fluid dilution ratios limits that apply. Follow the usage instructions on the washer fluid container. Use BMW's Windshield Washer Concentrate or the equivalent.◀

Washer fluid reservoir

Adding washer fluid

Only add washer fluid when the engine is cool, and then close the cover completely to avoid contact between the washer fluid and hot engine parts.

Otherwise, there is the danger of fire and a risk to personal safety if the fluid is spilled.◀

All washer nozzles are supplied from one reservoir.

Fill with a mixture of windshield washer concentrate and tap water and – if required – with a washer antifreeze, according to the manufacturer's recommendations.

Mix the washer fluid before adding to maintain the correct mixing ratio.

Do not add windshield washer concentrate and antifreeze undiluted and do not fill with pure water; this could damage the wiper system.

Do not mix window washer concentrates of different manufacturers, because otherwise it can result in clogging of the windshield washer nozzles. For the capacity, refer to technical data.

Automatic transmission with Steptronic

Transmission positions

D Drive, automatic position

Position for normal vehicle operation. All forward gears are available.

R is Reverse

Select only when the vehicle is stationary.

N is Neutral

Use in automatic car washes, for example. The vehicle can roll.

When the ignition is switched off, refer to page 61, position P is engaged automatically.

P Park

Select only when the vehicle is stationary. The drive wheels are blocked.

P is engaged automatically:

- After the engine is switched off when the vehicle is in radio ready state, refer to page 62, or when the ignition is switched off, refer to page 61, and when position R or D is engaged.
- With the ignition is off, if position N is engaged.
- If the safety belt is unbuckled, the driver's door is opened, and the brake pedal is not pressed while the vehicle is stationary and transmission position R or D is engaged.

Before exiting the vehicle, make sure that position P of the automatic transmission is engaged. Otherwise, the vehicle may begin to roll.

Kickdown

Kickdown is used to achieve maximum driving performance. Press on the gas pedal beyond the resistance point at the full throttle position.

Engaging the transmission position

- Transmission position P can only be disengaged if the engine is running and the brake pedal is pressed.
- With the vehicle stationary, press on the brake pedal before shifting out of P or N; otherwise, the shift command will not be executed: shift lock.

Depress the brake until you start driving

To prevent the vehicle from creeping after you select a driving position, maintain pressure on the brake pedal until you are ready to start.

Engaging D, R and N

Briefly push the selector lever in the desired direction, beyond a resistance point if necessary.

After releasing the selector lever, it returns to its center position.

Press unlock button, in order to:

- Engage R.
- Shift out of P.

Engaging P

Press button P.

Sport program and manual mode

Activating the sport program

Push the selector lever to the left out of transmission position D.

In the instrument cluster, DS is displayed, or the engaged gear, e.g., S1 with the Sport automatic transmission. The sport program of the transmission is activated.

Activating the M/S manual mode

- 1. Push the selector lever to the left out of transmission position D.
- Push the selector lever forward or pull it backward.

Manual mode becomes active and the gear is changed.

The engaged gear is displayed in the instrument cluster, e.g., M1.

Once maximum engine speed is attained, M/S manual mode is automatically upshifted as needed.

Switching to manual mode

- To shift down: press the selector lever forward.
- To shift up: pull the selector lever rearwards.

Gears will only be shifted at appropriate engine and road speeds, e.g., downshifting is not possible if the engine speed is too high.

The selected gear is briefly displayed in the instrument cluster, followed by the current gear.

Sport automatic transmission: prevent automatic upshifting in M/S manual mode

For vehicles with Sport automatic transmissions, automatic shift operations are not performed, at maximum engine speed for example, if one of the following conditions is met:

- DSC deactivated.
- TRACTION activated.
- SPORT+ activated.

In addition, the kickdown is deactivated.

Ending the sport program/manual mode

Push the selector lever to the right.

D is displayed in the instrument cluster.

Shift paddles

The shift paddles on the steering wheel allow you to shift gears quickly while keeping both hands on the steering wheel.

If the shift paddles on the steering wheel are used to shift gears in automatic mode, the transmission temporarily switches to manual mode.

If the shift paddles are not used and the vehicle is not accelerated for a certain time, the system switches back into automatic mode if the selector lever is in transmission position D.

- ▶ Shift up: pull right shift paddle.
- Shift down: pull left shift paddle.

Gears will only be shifted at appropriate engine and road speeds, e.g., downshifting is not possible if the engine speed is too high.

The selected gear is briefly displayed in the instrument cluster, followed by the current gear.

Displays in the instrument cluster

The transmission position is displayed, e.g.: P.

Check Control

The concept

The Check Control system monitors functions in the vehicle and notifies you of malfunctions in the monitored systems.

A Check Control message is displayed as a combination of indicator or warning lamps and text messages in the instrument cluster and in the Head-up Display.

In addition, an acoustic signal may be output and a text message may appear on the Control Display.

Indicator/warning lamps

The indicator and warning lamps in the instrument cluster can light up in a variety of combinations and colors.

Several of the lamps are checked for proper functioning and light up temporarily when the engine is started or the ignition is switched on.

Text messages

Text messages in combination with a symbol in the instrument cluster explain a Check Control message and the meaning of the indicator and warning lamps.

Supplementary text messages

Additional information, such as on the cause of a fault or the required action, can be called up via Check Control.

The supplementary text of urgent messages is automatically displayed on the Control Display.

Hiding Check Control messages

Press the computer button on the turn signal lever.

- Some Check Control messages are displayed continuously and are not cleared until the malfunction is eliminated. If several malfunctions occur at once, the messages are displayed consecutively.
 - These messages can be hidden for approx. 8 seconds. After this time, they are displayed again automatically.
- Other Check Control messages are hidden automatically after approx. 20 seconds.
 They are stored and can be displayed again later.

Fuel gauge

The vehicle inclination may cause the display to vary.

US models: the arrow beside the fuel pump symbol shows which side of the vehicle the fuel filler

flap is on.

Hints on refueling, refer to page 156.

Tachometer

Always avoid engine speeds in the red warning field. In this range, the fuel supply is interrupted to protect the engine.

Engine oil temperature

- Cold engine: the pointer is at the low temperature end.
 Drive at moderate engine and vehicle speeds.
- Normal operating temperature: the pointer is in the middle or in the left half of the temperature display.
- Hot engine: the pointer is at the high temperature end. A Check Control message is also displayed.

Coolant temperature

If the coolant along with the engine becomes too hot, a Check Control message is displayed.

Check the coolant level, refer to page 171.

External temperature warning

If the indicator drops to +37 °F/+3 °C or lower, a signal sounds.

A Check Control message is displayed.

There is the increased danger of ice.

Ice on roads

Even at temperatures above +37 °F/+3 °C, there can be a risk of ice on roads.

Therefore, drive carefully on bridges and shaded roads, for example, to avoid the increased risk of an accident. ◀

Range

After the reserve range is reached:

- A Check Control message is displayed briefly.
- ▶ The remaining range is shown on the onboard computer.
- ▶ When a dynamic driving style is used, such as when cornering quickly, operation of the engine is not always ensured.

The Check Control message appears continuously below a range of approx. 30 miles/50 km.

Refuel promptly

Refuel no later than at a range of 30 miles/50 km, or operation of the engine is not ensured and damage may occur. ◄

Gear shift indicator

The concept

The system recommends the most fuel efficient gear in the current driving situation.

Depending on how the vehicle is equipped and the country-specific version of the vehicle, the gear shift indicator is active in the manual mode of the automatic transmission and in the manual transmission.

Indicators to shift up or down are displayed in the instrument cluster.

On vehicles without a gear shift indicator, the engaged gear is displayed.

Automatic transmission: displays

Speed limit detection with No Passing Information

The concept

Speed limit detection

Speed limit detection uses a symbol in the shape of a traffic sign to display the currently detected speed limit. The camera at the base of the interior rearview mirror detects traffic signs at the edge of the road as well as variable overhead sign posts. Traffic signs with extra symbols for wet road conditions, etc. are also detected and compared with vehicle interior data, such as for the rain sensor, and are displayed depending on the situation. The system takes into account the information stored in the navigation system and also displays speed limits present on routes without signs.

No Passing Information

No Passing Information in the instrument cluster displays the beginnings and ends of no passing zones detected by the camera. The system accounts for only the beginnings and ends of No Passing zones marked by signs.

No display is shown:

- ▶ In countries where No Passing zones are primarily identified with road markings.
- On routes without signage.
- Where there are railroad crossings, highway markings or other situations where no signage is present, but passing would not be permitted.

Hints

Personal judgment

The system cannot serve as a substitute for the driver's personal judgment of the traffic situation.

The system assists the driver and does not replace the human eye. ◀

No Passing Information can also be displayed in the Head-up Display.

System limits

The system may not be fully functional and may provide incorrect information in the following situations:

- ▶ In heavy fog, rain or snowfall.
- When signs are concealed by objects.
- When driving very close to the vehicle in front of you.
- When driving toward bright lights.
- When the windshield behind the interior rearview mirror is fogged over, dirty or covered by a sticker, etc.
- In the event of incorrect detection by the camera.
- If the speed limits stored in the navigation system are incorrect.
- In areas not covered by the navigation system.
- When roads differ from the navigation, such as due to changes in the road network.
- When passing buses or trucks with a speed sticker.
- ▶ If the traffic signs are non-conforming.
- During calibration of the camera immediately after vehicle shipment.

Selection lists in the instrument cluster

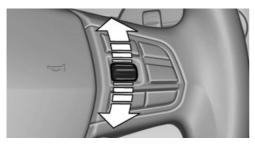

The concept

The following can be operated using the buttons and the thumbwheel on the steering wheel and the display in the instrument cluster:

- Current audio source.
- Redial on telephone.
- Activation of the voice activation system.

Activating a list and creating the setting

On the right side of the steering wheel, turn the thumbwheel to activate the corresponding list.

Using the thumbwheel, select the desired setting and confirm it by pressing the thumbwheel.

Information in detail

Range

Displays the estimated cruising range available with the remaining fuel.

It is calculated based on your driving style over the last 20 miles/30 km.

Average fuel consumption

The average fuel consumption is calculated for the period during which the engine is running.

The average fuel consumption is calculated for the distance traveled since the last reset by the onboard computer.

Average speed

Periods in which the vehicle is parked with the engine manually stopped do not enter into the calculation of the average speed.

Resetting average values

Press and hold the computer button on the turn signal lever.

Distance to destination

The distance remaining to the destination is displayed if a destination is entered in the navigation system before the trip is started.

The distance to the destination is adopted automatically.

Time of arrival

The estimated time of arrival is displayed if a destination is entered in the navigation system before the trip is started.

The time must be correctly set.

Speed limit detection

Description of the speed limit detection, refer to page 83, function.

Speed limit

Parking lamps/low beams, headlamp control

General information

Switch position: 0, **ID** , **ID**

If the driver door is opened with the ignition switched off, the exterior lighting is automatically switched off at these switch settings.

Parking lamps

Switch position **ED QE**: the vehicle lamps light up on all sides, e.g., for parking.

Do not use the parking lamps for extended periods; otherwise, the battery may become discharged and it would then be impossible to start the engine.

When parking, it is preferable to switch on the one-sided roadside parking lamps, refer to page 90.

Low beams

Switch position **ID** with the ignition switched on: the low beams light up.

Welcome lamps

When parking the vehicle, leave the switch in position D or b: the parking and interior lamps light up briefly when the vehicle is unlocked.

Activating/deactivating

Setting the duration

- "Settings"
- 2. "Lighting"
- 3. "Pathway lighting:"
- Set the duration.

The setting is stored for the remote control currently in use.

Automatic headlamp control

Switch position **ID**: the low beams are switched on and off automatically, e.g., in tunnels, in twilight or if there is precipitation. The indicator lamp in the instrument cluster lights up.

A blue sky with the sun low on the horizon can cause the lights to be switched on.

The low beams always stay on when the fog lamps are switched on.

Personal responsibility

The automatic headlamp control cannot serve as a substitute for your personal judgment in determining when the lamps should be switched on in response to ambient lighting conditions.

For example, the sensors are unable to detect fog or hazy weather. To avoid safety risks, you should always switch on the lamps manually under these conditions.

Daytime running lights

With the ignition switched on, the daytime running lights light up in position 0, $\Rightarrow D$ **Q** ξ or $\notin C$. After the ignition is switched off, the parking lamps light up in position $\Rightarrow D$ **Q** ξ .

Activating/deactivating

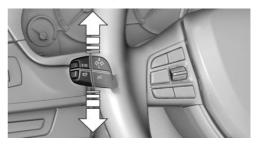

In some countries, daytime running lights are compulsory, so it may not be possible to deactivate the daytime running lights.

- 1. "Settings"
- 2. "Lighting"

3. "Daytime running lamps"

The setting is stored for the remote control currently in use.

Roadside parking lamps

The vehicle can be illuminated on one side.

Switching on

With the ignition switched off, press the lever either up or down past the resistance point for approx. 2 seconds.

Switching off

Briefly press the lever to the resistance point in the opposite direction.

Adaptive light control

The concept

Adaptive Light Control is a variable headlamp control system that enables dynamic illumination of the road surface.

Depending on the steering angle and other parameters, the light from the headlamp follows the course of the road.

Activating

Switch position \mathcal{D} with the ignition switched on.

The turning lamps are automatically switched on depending on the steering angle or the use of turn signals.

To avoid blinding oncoming traffic, the Adaptive Light Control does not swivel to the driver's side when the vehicle is at a standstill.

When driving in reverse, only the turning lamp is active.

Self-leveling headlamps

The self-leveling headlamps compensate for acceleration and braking operations in order not to blind the oncoming traffic and to achieve optimum illumination of the roadway.

Malfunction

A Check Control message is displayed.

Adaptive light control is malfunctioning or has failed. Have the system checked as soon as possible.

Headlamp range control

With halogen headlamps, the headlamp range of the low beams can be manually adjusted for the vehicle load to avoid blinding oncoming traffic.

The values following the slash apply to trailer operation.

0/1 = 1 to 2 people without luggage.

1/1 = 5 people without luggage.

1/2 = 5 people with luggage.

2/2 = 1 person, full cargo area.

High-beam Assistant

The concept

If while in switch position ∰ or ∰ the low beams are automatically switched on, this system automatically switches the high beams on and then off. The procedure is controlled by a sensor on the front of the interior rearview mirror. The assistant ensures that the high beams are switched on whenever the traffic situation

allows. The driver can intervene at any time and switch the high beams on and off as usual.

Activating

- Press the button on the turn signal lever, arrow.

The indicator lamp in the instrument cluster lights up.

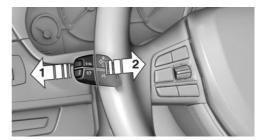

When the lights are switched on, the high beams are switched on and off automatically.

The system responds to light from oncoming traffic and traffic driving ahead of you, and to adequate illumination, e.g., in towns and cities.

The blue indicator lamp in the instrument cluster lights up when the system switches on the high beams.

Switching the high beams on and off manually

- High beams on, arrow 1.
- High beams off/headlamp flasher, arrow 2.

The High-beam Assistant can be switched off when manually adjusting the light. To reactivate the High-beam Assistant, press the button on the turn signal lever.

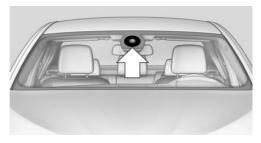

System limits

Personal responsibility
The high-beam assistant cannot serve as a substitute for the driver's personal judgment of when to use the high beams. Therefore, manually switch off the high beams in situations where this is required to avoid a safety risk.

The system is not fully functional in situations such as the following, and driver intervention may be necessary:

- ▶ In very unfavorable weather conditions, such as fog or heavy precipitation.
- In detecting poorly-lit road users, such as pedestrians, cyclists, horseback riders and wagons; when driving close to train or ship traffic; and at animal crossings.
- In tight curves, on hilltops or in depressions, in cross traffic or half-obscured oncoming traffic on freeways.
- In poorly-lit towns and cities and in the presence of highly reflective signs.
- At low speeds.
- When the windshield in front of the interior rearview mirror is fogged over, dirty or covered with stickers, etc.

Camera

The camera is located near the base of the mirror

Keep the windshield in the area behind the interior rear view mirror clean and clear.

Fog lamps

Front fog lamps

The parking lamps or low beams must be switched on.

Press the button. The green indicator lamp lights up.

If the automatic headlamp control, refer to page 90, is activated, the low beams will come on automatically when you switch on the front fog lamps.

Instrument lighting

Adjusting

The parking lamps or low beams must be switched on to adjust the brightness.

Adjust the brightness using the thumbwheel.

Interior lamps

General information

The interior lamps, footwell lamps, entry lamps and courtesy lamps are controlled automatically.

The brightness of some of these lamps is influenced by the thumbwheel for the instrument lighting.

- 1 Interior lamps
- 2 Reading lamp

Switching the interior lamps on and off

Press the button.

To switch off permanently: press the button for approx. 3 seconds.

Switch back on: press button.

Reading lamps

Press the button.

Reading lamps are located at the front and rear next to the interior lamps.

When the interior lamps are switched off permanently, the reading lamps cannot be switched on.

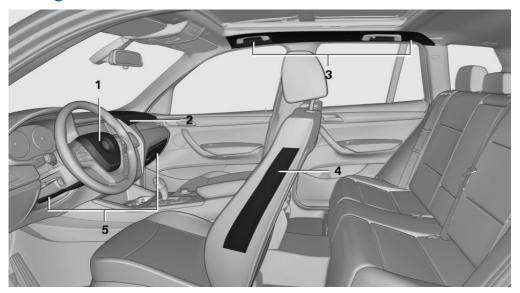

Safety

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equip-

ment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Airbags

- Front airbag, driver
- 2 Front airbag, front passenger
- 3 Head airbag
- Front airbags

Front airbags help protect the driver and front passenger by responding to frontal impacts in which safety belts alone cannot provide adequate restraint.

Side airbags

In a lateral impact, the side airbag supports the side of the body in the chest and lap area.

- 4 Side airbag
- 5 Knee airbags

Head airbags

In a lateral impact, the head airbag supports the head.

Knee airbag

The knee airbag supports the legs in a frontal impact.

Protective action

Airbags are not triggered in every impact situation, e.g., in less severe accidents or rear-end collisions.

Information on how to ensure the optimal protective effect of the airbags

- Keep at a distance from the airbags.
- Always grasp the steering wheel on the steering wheel rim, holding your hands at the 3 o'clock and 9 o'clock positions, to keep the danger of injury to your hands or arms as low as possible if the airbag is triggered.
- ▶ There should be no people, animals, or objects between an airbag and a person.
- Do not use the cover of the front airbag on the front passenger side as a storage area.
- Keep the dashboard and window on the front passenger side clear, i.e., do not cover with adhesive labels or coverings, and do not attach holders such as for navigation instruments and mobile phones.
- Make sure that the front passenger is sitting correctly, i.e., keeps his or her feet and legs in the footwell; otherwise, leg injuries can occur if the front airbag is triggered.
- Do not place slip covers, seat cushions or other objects on the front passenger seat that are not approved specifically for seats with integrated side airbags.
- Do not hang pieces of clothing, such as jackets, over the backrests.
- Make sure that occupants keep their heads away from the side airbag and do not rest against the head airbag; otherwise, injuries can occur if the airbags are triggered.
- Do not remove the airbag restraint system.
- Do not remove the steering wheel.
- Do not apply adhesive materials to the airbag cover panels, cover them or modify them in any way.

Never modify either the individual components or the wiring in the airbag system. This also applies to steering wheel covers, the dashboard, the seats, the roof pillars and the sides of the headliner. ◄

Even when all instructions are followed closely, injury from contact with the airbags cannot be ruled out in certain situations.

The ignition and inflation noise may lead to short-term and, in most cases, temporary hearing impairment in sensitive individuals.

In the case of a malfunction, deactivation and after triggering of the airbags

Do not touch the individual components immediately after the system has been triggered; otherwise, there is the danger of burns.

Only have the airbags checked, repaired or dismantled and the airbag generator scrapped by your service center or a workshop that has the necessary authorization for handling explosives.

Non-professional attempts to service the system could lead to failure in an emergency or undesired triggering of the airbag, either of which could result in injury. ◀

Warnings and information on the airbags are also found on the sun visors.

Functional readiness of the airbag system

When the ignition is switch on, the warning lamp in the instrument cluster lights up briefly and thereby indicates

the operational readiness of the entire airbag system and the belt tensioner.

Airbag system malfunctioning

- Warning lamp does not come on when the ignition is turned on.
- ▶ The warning lamp lights up continuously.

When there is a malfunction, have the airbag system checked immediately

When there is a malfunction, have the airbag system checked immediately; otherwise, there is a risk that the system does not function as expected in the event of an accident despite corresponding severity of the accident. ◄

Automatic deactivation of the front passenger airbags

The system determines whether the front passenger seat is occupied by measuring the resistance of the human body.

The front, knee, and side airbag on the front passenger side are activated or deactivated accordingly.

Leave feet in the footwell

Make sure that the front passenger keeps his or her feet in the footwell; otherwise, the front passenger airbags may not function properly. ◀

Child restraint fixing system in the front passenger seat

Before transporting a child on the front passenger seat, refer to the safety notes and instructions under Children on the front passenger seat. ◀

Malfunction of the automatic deactivation system

When transporting older children and adults, the front passenger airbags may be deactivated in certain sitting positions. In this case, the indicator lamp for the front passenger airbags lights up.

In this case, change the sitting position so that the front passenger airbags are activated and the indicator lamp goes out.

If it is not possible to activate the airbags, have the person sit in the rear.

To make sure that the occupied seat cushion can be evaluated correctly

- Do not attach covers, cushions, ball mats or other items to the front passenger seat unless they are specifically recommended by the manufacturer of your vehicle.
- Do not place any electronic devices on the passenger seat if a child restraint system is to be installed on it.
- Do not place objects under the seat that could press against the seat from below.

Indicator lamp for the front passenger airbags

The indicator lamp for the front passenger airbags indicates the operating state of the front passenger airbags.

The lamp indicates whether the airbags are activated or deactivated.

- ▶ The indicator lamp lights up when a child who is properly seated in a child restraint fixing system intended for that purpose is detected on the seat or the seat is empty. The airbags on the front passenger side are not activated.
- The indicator lamp does not light up when, for example, a correctly seated person of sufficient size is detected on the seat. The airbags on the front passenger side are activated.

Detected child seats

The system generally detects children seated in a child seat, especially in the child seats that were required by NHTSA when the vehicle was manufactured. After installing a child seat, make sure that the indicator lamp for the front passenger airbags lights up. This indicates that the child seat has been detected and the front passenger airbags are not activated.

Strength of the driver's and front passenger airbag

The strength with which the driver's and front passenger airbags are triggered depends on the position of the driver's and front passenger seats.

To maintain the accuracy of this function over the long-term, calibrate the front seats when a corresponding message appears on the Control Display.

Calibrating the front seats

A corresponding message appears on the Control Display.

- Move the respective seat forward all the way.
- 2. Move the respective seat forward again. It moves forward briefly.
- 3. Readjust the seat to the desired position.

The calibration procedure is completed when the message on the Control Display disappears.

If the message continues to be displayed, repeat the calibration.

If the message does not disappear after a repeat calibration, have the system checked as soon as possible.

Unobstructed area of movement
Ensure that the area of movement of the
seats is unobstructed to avoid personal injury
or damage to objects.

Tire Pressure Monitor TPM

The concept

The system monitors tire pressure in the four mounted tires. The system warns you if there is a significant loss of pressure in one or more tires. For this purpose, sensors in the tire valves measure the tire pressure and tire temperature.

Hints

Tire damage due to external factors
Sudden tire damage caused by external influences cannot be indicated in advance.

✓

Pay attention to the other information and indications under Tire inflation pressure, refer to page 159, as well when using the system.

Functional requirements

The system must have been reset with the correct tire inflation pressure; otherwise, reliable signaling of tire pressure loss is not ensured.

Reset the system again after each correction of the tire inflation pressure and after every tire or wheel change.

Always use wheels with TPM electronics to ensure that the system will operate properly.

Status display

The current status of the Tire Pressure Monitor TPM can be displayed on the Control Display, e.g., whether or not the TPM is active.

- "Vehicle Info"
- 2. "Vehicle status"
- 3. (!) "Tire Pressure Monitor"

The status is displayed.

Status display

The tire and system status is indicated by the color of the wheels and a text message on the Control Display.

All wheels green

System is active and will issue a warning relative to the tire inflation pressures stored during the last reset.

One wheel is yellow

A flat tire or major drop in inflation pressure in the indicated tire.

All wheels are yellow

A flat tire or major drop in inflation pressure in several tires.

Wheels, gray

The system cannot detect a flat tire due to a malfunction.

For Canadian models: Additional information

The status display additionally shows the current tire inflation pressures and tire temperatures. The values shown are current measurement values and may vary depending on driving style or weather conditions.

Carry out reset

Reset the system after each correction of the tire inflation pressure and after every tire or wheel change.

- "Vehicle Info"
- "Vehicle status"
- 3. (!) "Perform reset"
- 4. Start the engine do not drive away.
- Reset the tire pressure using "Perform reset".
- Drive away.

The tires are shown in gray and the status is displayed.

After driving faster than 19 mph/30 km/h for a short period, the tire inflation pressures set are accepted as reference values. The resetting

process is completed automatically during driving.

After a successfully completed Reset, the wheels on the Control Display are shown in green and "Tire Pressure Monitor (TPM) active" is displayed.

The trip can be interrupted at any time. If you drive away again, the reset resumes automatically.

Low tire pressure message

The yellow warning lamp lights up. A Check Control message is displayed.

- ▶ There is a flat tire or a major loss in tire inflation pressure.
- No reset was performed for the system. The system therefore issues a warning based on the tire pressures before the last reset.
- Reduce your speed and stop cautiously. Avoid sudden braking and steering maneuvers.
- 2. Check whether the vehicle is fitted with regular tires or run-flat tires.

Run-flat tires, refer to page 165, are labeled with a circular symbol containing the letters RSC marked on the tire sidewall.

Do not continue driving without run-flat tires

Do not continue driving if the vehicle is not equipped with run-flat tires; continued driving may result in serious accidents. ◀

When a low inflation pressure is indicated, DSC Dynamic Stability Control is switched on if necessary.

Actions in the event of a flat tire

Normal tires

Identify the damaged tire.
 Do this by checking the air pressure in all four tires.

If the tire inflation pressure in all four tires is correct, the Tire Pressure Monitor may not have been initialized. In this case, initialize the system.

If an identification is not possible, please contact the service center.

Rectify the flat tire on the damaged wheel.
 Use of tire sealant, e.g., the Mobility System, may damage the TPM wheel electronics. In this case, have the electronics checked at the next opportunity and have them replaced if necessary.

Run-flat tires

Maximum speed

You can continue driving with a damaged tire at speeds up to 50 mph/80 km/h.

Continued driving with a flat tire

If continuing to drive with a damaged tire:

- Avoid sudden braking and steering maneuvers.
- 2. Do not exceed a speed of 50 mph/80 km/h.
- 3. Check the air pressure in all four tires at the next opportunity.

If the tire inflation pressure in all four tires is correct, it is possible that a reset was not carried out for the Tire Pressure Monitor. In that case, carry out a reset.

Possible driving distance with complete loss of tire inflation pressure:

The possible driving distance after a loss of tire inflation pressure depends on the cargo load and the driving style and conditions.

For a vehicle containing an average load, the possible driving distance is approx. 50 miles/80 km.

When the vehicle is driven with a damaged tire, its handling characteristics change, e.g., reduced lane stability during braking, a longer braking distance, and altered self-steering properties. Adjust your driving style accord-

ingly. Avoid abrupt steering maneuvers or driving over obstacles, e.g., curbs, potholes, etc.

Because the possible driving distance depends on how the vehicle is used during the trip, the actual distance may be smaller or greater depending on the driving speed, road conditions, external temperature, cargo load, etc.

Continued driving with a flat tire
Drive moderately and do not exceed a speed of 50 mph/80 km/h.

A loss of tire inflation pressure results in a change in the handling characteristics, e.g., reduced lane stability during braking, a longer braking distance and altered self-steering properties.

Final tire failure

Vibrations or loud noises while driving can indicate the final failure of the tire. Reduce speed and stop; otherwise, pieces of the tire could come loose and cause an accident. Do not continue driving, and contact your service center.

Required inflation pressure check message

A Check Control message is displayed.

Check the tire inflation pressure and carry out a reset of the system.

In some cases, a wheel was changed without having carried out a reset.

System limits

The system does not function properly if a reset has not been carried out, e.g., a flat tire is reported even though the tire inflation pressures are correct.

The tire pressure depends on the temperature of the tire. If the tire temperature rises, e.g., due to driving or because of the heat of the Sun, the tire inflation pressure increases also. The tire pressure is reduced when the tire

temperature falls again. This behavior may cause a warning to be issued if temperatures fall very sharply.

Malfunction

The yellow warning lamp flashes and then lights up continuously. A Check Control message is displayed. No flat

tire or loss of tire pressure can be detected.

Display in the following situations:

- A wheel without TPM electronics is fitted: have the service center check it if necessary.
- Malfunction: have the system checked by your service center.
- TPM was unable to complete the reset. Reset the system again.
- Disturbance by systems or devices with the same radio frequency: after leaving the area of the disturbance, the system automatically becomes active again.

Declaration according to NHTSA/ FMVSS 138 Tire Pressure Monitoring System

Each tire, including the spare (if provided) should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label, (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.) As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to

tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale. Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

FTM Flat Tire Monitor

The concept

The system does not measure the actual inflation pressure in the tires.

It detects a pressure loss in a tire by comparing the rotational speeds of the individual wheels while moving.

In the event of a pressure loss, the diameter and therefore the rotational speed of the corresponding wheel change. This is detected and reported as a flat tire.

Functional requirements

The system must have been initialized when the tire inflation pressure was correct; otherwise, reliable signaling of a flat tire is not ensured. Initialize the system after each correction of the tire inflation pressure and after every tire or wheel change.

Status display

The current status of the Flat Tire Monitor can be displayed on the Control Display, e.g., whether or not the FTM is active.

- 1. "Vehicle Info"
- 2. "Vehicle status"
- 3. (!) "Flat Tire Monitor (FTM)"

The status is displayed.

Initialization

The initialization process adopts the set inflation tire pressures as reference values for the detection of a flat tire. Initialization is started by confirming the inflation pressures.

Do not initialize the system when driving with snow chains.

- 1. "Vehicle Info"
- "Vehicle status"
- 3. (!) "Perform reset"
- 4. Start the engine do not drive away.
- 5. Start the initialization with "Perform reset".
- 6. Drive away.

The initialization is completed while driving, which can be interrupted at any time.

The initialization automatically continues when driving resumes.

Indication of a flat tire

The yellow warning lamp lights up. A Check Control message is displayed.

There is a flat tire or a major loss in tire inflation pressure.

- Reduce your speed and stop cautiously. Avoid sudden braking and steering maneuvers.
- 2. Check whether the vehicle is fitted with regular tires or run-flat tires.

Run-flat tires, refer to page 165, are labeled with a circular symbol containing the letters RSC marked on the tire sidewall.

Do not continue driving without run-flat tires

Do not continue driving if the vehicle is not equipped with run-flat tires; continued driving may result in serious accidents.◀

When a flat tire is indicated, DSC Dynamic Stability Control is switched on if necessary.

System limits

A

Sudden tire damage

Sudden serious tire damage caused by external influences cannot be indicated in advance.

A natural, even pressure loss in all four tires cannot be detected. Therefore, check the tire inflation pressure regularly.

The system could be delayed or malfunction in the following situations:

- When the system has not been initialized.
- When driving on a snowy or slippery road surface.
- Sporty driving style: slip in the drive wheels, high lateral acceleration.
- When driving with snow chains.

Final tire failure

Vibrations or loud noises while driving can indicate the final failure of the tire. Reduce speed and stop; otherwise, pieces of the tire could come loose and cause an accident. Do not continue driving, and contact your service center.

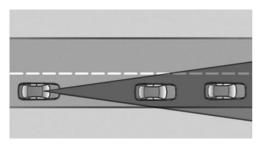

Collision warning

Depending on how the equipment is equipped, the collision warning system consists of one of the two systems:

Collision warning

The concept

The system issues a two-phase warning of a danger of collision at speeds above approx. 10 mph/15 km/h. The time of these warnings may vary depending on the current driving situation.

In the process, vehicles in a similar direction of movement are observed if they are located within the detection range of the system.

When the vehicle is intentionally brought into contact with a vehicle, the collision warning is delayed to avoid misleading warnings.

Warning stages

Prewarning

This warning is issued, for example, when there is the impending danger of a collision or the distance to the vehicle ahead is too small.

Acute warning

Warning of the imminent danger of a collision when the vehicle approaches another vehicle at a relatively high differential speed.

Switching the warning function on/off

Press the button

- On: the LED lights up.
- Off: the LED goes out.

The state is stored for the remote control currently in use.

Display in the instrument cluster

The collision warning can be issued in the instrument cluster, in the Head-up Display, and acoustically.

The collision warning can be issued in the instrument cluster and acoustically.

Warning stages

Symbol Measure

The vehicle lights up red: prewarn-

The vehicle flashes red and an acoustic signal sounds: acute warning.

You are requested to intervene by braking or making an evasive maneuver.

Adapting your speed and driving style The display does not relieve the driver of the responsibility to adapt his or her driving speed and style to the traffic conditions. ◀

System limits

Be alert

Due to system limitations, warnings may be not be issued at all, or may be issued late or improperly. Therefore, always be alert and ready to intervene; otherwise, there is the danger of an accident occurring.

◀

Detection range

The detection capacity of the camera and the collision warning has limitations.

This may result in the warning not being issued or being issued late.

For example, the following situations may not be detected:

- Slow moving vehicles when you approach them at high speed.
- Vehicles that suddenly swerve in front of you or sharply decelerating vehicles.
- Vehicles with an unusual rear appearance.
- Two-wheeled vehicles ahead of you.

Functional limitations

The system may not be fully functional in the following situations:

- In heavy fog, rain, sprayed water or snowfall.
- In tight curves.
- If the camera view field or the front windshield are dirty or covered.
- When driving toward bright lights.
- In the case of vehicles with insufficiently visible tail lamps.
- In the case of partially covered vehicles.
- Up to 10 seconds after the start of the engine, via the Start/Stop knob.
- During calibration of the camera immediately after vehicle shipment.

Prewarning sensitivity

Depending on the set prewarning time, this may result in increased false warnings.

Camera

The camera is located near the base of the mirror.

Keep the windshield in the area behind the interior rear view mirror clean and clear.

Lane departure warning

The concept

Starting at a specific speed, this system alerts you when the vehicle on streets with lane markings is about to leave the lane. Depending on the country-specific version of the vehicle, the speed is between 35 mph/55 km/h and 45 mph/70 km/h. If the system is switched on below this speed, a message appears in the instrument cluster.

The steering wheel begins vibrating gently in the event of warnings. The time of the warning may vary depending on the current driving situation.

The system does not provide a warning if the turn signal is set before leaving the lane.

Notes

Personal responsibility

The system cannot serve as a substitute for the driver's personal judgment of the course of the road and the traffic situation.

In the event of a warning, do not jerk the steering wheel, as you may lose control of the vehicle.

At a glance

- Off: the LED goes out.

The state is stored for the remote control currently in use.

Display in the instrument cluster

- Lines: system is activated.
- Arrows: at least one lane marking was detected and warnings can be issued.

Issued warning

If you leave the lane and if a lane marking has been detected, the steering wheel begins vibrating.

If the turn signal is set before changing the lane, a warning is not issued.

End of warning

The warning ends:

- Automatically after approx. 3 seconds.
- When returning to your own lane.
- When braking hard.
- When using the turn signal.

System limits

The system may not be fully functional in the following situations:

- ▶ In heavy fog, rain or snowfall.
- In the event of worn, poorly visible, merging, diverging, or multiple lane markings such as in construction areas.
- When lane markings are covered in snow, ice, dirt or water.
- In tight curves or on narrow lanes.
- When the lane markings are covered by objects.
- When driving very close to the vehicle in front of you.
- When driving toward bright lights.
- When the windshield in front of the interior rearview mirror is fogged over, dirty or covered with stickers, etc.
- During calibration of the camera immediately after vehicle shipment.

Brake force display

The concept

 During normal brake application, the outer brake lamps light up. During heavy brake application, the inner brake lamps light up in addition.

Driving stability control systems

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Antilock Brake System ABS

ABS prevents locking of the wheels during braking.

The vehicle remains steerable even during full brake applications, thus increasing active safety.

ABS is operational every time you start the engine.

Brake assistant

When you apply the brakes rapidly, this system automatically produces the maximum braking force boost. This then reduces braking distance to a minimum during full braking. This system utilizes all of the benefits provided by ABS.

Do not reduce the pressure on the brake pedal for the duration of the full braking.

DSC Dynamic Stability Control

The concept

DSC prevents traction loss in the driving wheels when driving away and accelerating. DSC also recognizes unstable vehicle conditions, such as fishtailing or nose-diving. Sub-

ject to physical limits, DSC helps to keep the vehicle on a steady course by reducing engine speed and by applying brakes at individual wheels.

Adjust your driving style to the situation
An appropriate driving style is always the responsibility of the driver.

The laws of physics cannot be repealed, even with DSC.

Therefore, do not reduce the additional safety margin by driving in a risky manner.◀

Indicator/warning lamps

The indicator lamp flashes: DSC controls the drive forces and brake forces.

The indicator lamp lights up: DSC has

failed.

Deactivating DSC: DSC OFF

When DSC is deactivated, driving stability is reduced during acceleration and when driving in bends.

To increase vehicle stability, activate DSC again as soon as possible.

Deactivating DSC

Press and hold the button, but not longer than approx. 10 seconds, until the

indicator lamp for DSC OFF lights up in the instrument cluster and DSC OFF is displayed.

The DSC system is switched off.

Activating DSC

Press the button.

DSC OFF and the DSC OFF indicator

lamp go out.

Indicator/warning lamps

When DSC is deactivated, DSC OFF is displayed in the instrument cluster.

The indicator lamp lights up: DSC is deactivated.

DTC Dynamic Traction Control

The concept

The DTC system is a version of the DSC in which forward momentum is optimized.

The system ensures maximum forward momentum on special road conditions, e.g., unplowed snowy roads, but driving stability is limited.

It is therefore necessary to drive with appropriate caution.

You may find it useful to briefly activate DTC under the following special circumstances:

- When driving in slush or on uncleared, snow-covered roads.
- When rocking the vehicle or driving off in deep snow or on loose surfaces.
- When driving with snow chains.

Deactivating/activating DTC Dynamic Traction Control

Activating the Dynamic Traction Control DTC provides maximum traction on loose ground. Driving stability is limited during acceleration and when driving in bends.

Activating DTC

Press the button.

TRACTION is displayed in the instrument cluster and the indicator lamp for DSC OFF lights up.

Deactivating DTC

Press the button again.

TRACTION and the DSC OFF indica-

tor lamp go out.

Performance Control

Performance Control enhances the agility of your vehicle.

To enhance performance during sporty driving, the rear wheel on the inside of the curve is braked while the resulting braking effect is largely compensated by engine intervention.

xDrive

xDrive is the all-wheel-drive system of your vehicle. Concerted action by the xDrive and DSC further optimize traction and driving dynamics. The xDrive all-wheel-drive system variably distributes the drive forces to the front and rear axles as demanded by the driving situation and road surface.

HDC Hill Descent Control

The concept

HDC is a downhill driving assistant that automatically controls vehicle speed on steep downhill gradients. Without applying the brakes, the vehicle moves at slightly more than walking speed.

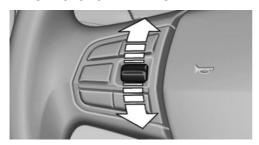

Hill Descent Control can be activated at speeds below approx. 22 mph/35 km/h. When driving downhill, the vehicle reduces its speed to approx. walking speed and then keeps its speed constant.

As long as there is active braking, the system is on standby. The system does not brake the vehicle during this time.

Use HDC in low gears or in transmission position D or R only.

Increasing or decreasing vehicle speed

Specify desired speed in the range from approx. 4 mph/6 km/h to approx. 15 mph/25 km/h using the rocker switch of the cruise control on the steering wheel. Vehicle speed can be changed by lightly accelerating.

- Press up the rocker switch to the point of resistance: the speed increases gradually.
- Press up the rocker switch past the point of resistance: the speed increases while the rocker switch is pressed.
- Press down the rocker switch to the point of resistance: the speed decreases graduallv.
- Press down the rocker switch past the point of resistance: when driving forward, the speed decreases to approx. 6 mph/10 km/h; when reversing, the speed decreases to approx. 4 mph/6 km/h.

Activating HDC

Press the button; the LED above the button lights up.

Deactivating HDC

Press the button again and the LED goes out. HDC is automatically deactivated above approx. 37 mph/60 km/h.

Display in the instrument cluster

The selected speed is displayed in the speedometer.

- Green: the system is actively braking the vehicle.
- Orange: the system is on standby.

Malfunction

A message is displayed in the instrument cluster. HDC is not available, e.g., due to elevated brake temperatures.

Dynamic Damping Control

The concept

This system reduces undesirable vehicle motion when using a dynamic driving style or traveling on uneven road surfaces.

The system enhances driving dynamics and comfort as required for the road surface and driving style.

Programs

The system offers several different programs.

The programs can be selected via the Driving Dynamics Control, refer to page 110.

SPORT

Consistently sporty control of the shock absorbers for greater driving agility.

SPORT+

Consistently sporty control of the shock absorbers for greater driving agility when driving with limited driving stabilization.

COMFORT/ECO PRO

Balanced control of the vehicle.

Variable sport steering

The variable sport steering increases the steering angle of the front wheels at large steering wheel angles, e.g., in tight curves or when parking. Steering becomes more direct.

It also varies the force required to turn the wheels in accordance with the vehicle speed.

This results in a sporty steering response. In addition, it becomes easier to steer during parking and maneuvering.

Driving Dynamics Control

The concept

The Driving Dynamics Control can be used to adjust the certain characteristics of the vehicle. Various programs can be selected for this purpose. The Driving Dynamics Control and the DSC OFF buttons can each be used to activate a program.

Operating the programs

Press the button	Program
₽ off	DSC OFF TRACTION
	SPORT+ SPORT COMFORT ECO PRO

Automatic program change

The system automatically switches to COM-FORT in the following situations:

- Failure of Dynamic Damping Control.
- Failure of DSC Dynamic Damping Control.
- The vehicle has a flat tire.
- When activating cruise control in TRAC-TION or DSC OFF mode.

DSC OFF

When DSC OFF, refer to page 107, is active, driving stability is limited during acceleration and when driving in bends.

TRACTION

When TRACTION is active, the vehicle has maximum traction on loose road surfaces. DTC Dynamic Traction Control, refer to page 108, is activated. Driving stability is limited during acceleration and when driving in bends.

SPORT+

Sporty driving with optimized chassis and adapted engine control with limited driving stabilization.

Dynamic Traction Control is switched on.

The driver handles several of the stabilization tasks.

Activating SPORT+

Press the button repeatedly until SPORT+ appears in the instrument

cluster and the DSC OFF indicator lamp lights up.

Automatic program change

When activating cruise control, the program automatically switches to SPORT mode.

Indicator/warning lamps

SPORT+ is displayed in the instrument cluster.

The DSC OFF indicator lamp lights up: Dynamic Traction Control is activated.

SPORT

Consistently sporty tuning of the suspension and engine control for greater driving agility with maximum driving stabilization.

The program can be configured to individual specifications. The configuration is stored for the remote control currently in use.

Activating SPORT

Press button repeatedly until SPORT is displayed in the instrument cluster.

Configuring SPORT

When the display is activated on the Control Display, refer to page 112, the SPORT driving mode can be set to individual specifications.

- Activating SPORT.
- "Configure SPORT"
- Configuring the SPORT driving mode.

SPORT can also be configured before it is activated:

- "Settings"
- 2. "SPORT mode"
- Configure driving mode.

This configuration is retrieved when the SPORT driving mode is activated.

COMFORT

For a balanced tuning with maximum driving stabilization.

Activating COMFORT

Press button repeatedly until COM-FORT is displayed in the instrument In certain situations, the system automatically changes to the NORMAL program, automatic program change, refer to page 110.

ECO PRO

ECO PRO, refer to page 151, provides consistent tuning to minimize fuel consumption for maximum range with maximum driving stabilization.

Comfort functions and the engine controller are adjusted.

The program can be configured to individual specifications.

Activating ECO PRO

Press button repeatedly until ECO PRO is displayed in the instrument cluster.

Configuring ECO PRO

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Cruise control

The concept

The system is functional at speeds beginning at approx. 20 mph/30 km/h.

It maintains the speed that was set using the control elements on the steering wheel.

The system brakes on downhill gradients if engine braking action is insufficient.

Unfavorable conditions
Do not use the system if unfavorable conditions make it impossible to drive at a constant speed, for instance:

- On curvy roads.
- In heavy traffic.
- On slippery roads, in fog, snow or rain, or on a loose road surface.

Otherwise, you could lose control of the vehicle and cause an accident. ◀

General information

When ECO PRO is activated, cruise control is also set to a driving style that saves on fuel consumption.

Controls

At a glance

Press the button	Function
් ෆ	Interrupt system on/off
SET	Store speed
RES	Resume speed
	Changing the speed

Switching on

Press the button on the steering wheel.

The marking in the speedometer is set to the current speed.

Cruise control can be used.

Switching off

Deactivated or interrupted system
If the system is deactivated or interrupted, actively intervene by braking and, if necessary, with evasive maneuvers; otherwise, there is the danger of an accident occurring.

Press the button.

- If active: press twice.
- If interrupted: press once.

The displays go out. The stored desired speed is deleted.

Interrupting the system

When active, press the button.

The system is automatically interrupted if:

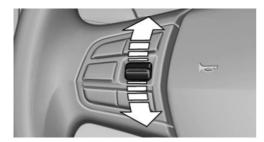

- The brakes are applied.
- The clutch pedal is depressed for a few seconds or released while a gear is not engaged.
- The gear engaged is too high for the current speed.
- The transmission position D is disengaged.
- DTC Dynamic Traction Control is activated or DSC is deactivated.
- DSC is actively controlling stability.
- HDC is activated.

Maintaining/storing the current speed

Press the button.

Or

Press the rocker switch while the system is interrupted.

When the system is switched on, the current speed is maintained and stored as the desired speed.

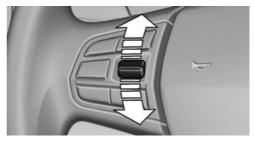

It is displayed in the speedometer and briefly displayed in the instrument cluster, Displays in the speedometer, refer to page 115.

When cruise control is maintained or stored, DSC Dynamic Stability Control is switched on, if necessary.

Changing/maintaining speed

The rocker switch can be pressed while the system is interrupted in order to maintain and store the current speed.

Adapting the desired speed
Adapt the desired speed to the road conditions and be ready to brake at all times; otherwise, there is the danger of an accident occurring.

Press the rocker switch up or down repeatedly until the desired speed is set.

If active, the displayed speed is stored and the vehicle reaches the stored speed if the road is clear.

- Each time the rocker switch is pressed to the point of resistance, the desired speed increases or decreases by approx.
 1 mph/1 km/h.
- Each time the rocker switch is pressed past the point of resistance, the desired speed increases or decreases by a maximum of 5 mph/10 km/h.
- ▶ Pressing the rocker switch to the resistance point and holding it there accelerates or decelerates the vehicle without requiring pressure on the accelerator. After the rocker switch is released, the vehicle maintains its final speed. Pressing the switch beyond the resistance point causes the vehicle to accelerate more rapidly.

Resuming the desired speed

Press the button.

The stored speed is reached and maintained.

Displays in the instrument cluster

Indicator lamp

Depending on how the vehicle is equipped, the indicator lamp in the instrument cluster indicates whether the sys-

tem is switched on.

- The marking lights up green: the system is active.
- The marking lights up orange: the system has been interrupted.
- The marking does not light up: the system is switched off.

Brief status display

Selected desired speed.

If --- appears briefly on the display for Check Control messages, it is possible that the system requirements for operation are currently not met.

PDC Park Distance Control

The concept

PDC supports you when parking. Objects that you are approaching slowly in front of or behind your vehicle are indicated with:

- Signal tones.
- Visual display.

General information

Measurements are made by ultrasound sensors in the bumpers.

The range is approx. 6 ft/2 m.

An acoustic warning is first given:

- ▶ By the front middle sensors and the two corner sensors at approx. 24 in/60 cm.
- By the rear middle sensors at approx.5 ft/1.50 m.

Notes

Check the traffic situation as well

PDC cannot serve as a substitute for the driver's personal judgment of the traffic situation. Check the traffic situation around the vehicle with your own eyes. Otherwise, an accident could result from road users or objects located outside of the PDC detection range.

Loud noises from outside and inside the vehicle may prevent you from hearing the PDC's signal tone.◀

Avoid driving quickly with PDC

Avoid approaching an object quickly.

Avoid driving away quickly while PDC is not yet active.

For technical reasons, the system may otherwise be too late in issuing a warning. ◀

Display

Signal tones

When approaching an object, an intermittent tone is sounded that indicates the position of the object. For example, if an object is detected to the left rear of the vehicle, a signal tone sounds from the left rear speaker.

The shorter the distance to the object becomes, the shorter the intervals.

If the distance to a detected object is less than approx. 12 in/30 cm, a continuous tone is sounded.

If objects are located both in front of and behind the vehicle, an alternating continuous signal is sounded.

The intermittent tone is interrupted after approx. 3 seconds:

- If the vehicle stops in front of an object that is detected by only one of the corner sensors.
- If moving parallel to a wall.

The signal tone is switched off:

- ▶ When the vehicle moves away from an object by more than approx. 4 in/10 cm.
- ▶ When transmission position P is engaged.

Volume

The volume of the PDC signal can be adjusted, refer to user's manual for Navigation, Entertainment, Communication.

The setting is stored for the remote control currently in use.

Visual warning

The approach of the vehicle to an object can be shown on the Control Display. Objects that are farther away are displayed on the Control Display before a signal tone sounds.

A display appears as soon as Park Distance Control (PDC) is activated.

The range of the sensors is represented in the colors red, green and yellow.

If the rearview camera image was selected last, it again appears on the display. To switch to PDC:

- Rear view camera" Select the symbol on the Control Display.
- 2. Press the controller.

The setting is stored for the remote control currently in use.

System limits

Limits of ultrasonic measurement

The detection of objects can reach the physical limits of ultrasonic measurement, e.g.:

- With tow bars and trailer hitches.
- With thin or wedge-shaped objects.
- With low objects.
- With objects with corners and sharp edges.

Low objects already displayed, e.g., curbs, can move into the blind area of the sensors before or after a continuous tone sounds.

High, protruding objects such as ledges may not be detected.

False warnings

PDC may issue a warning under the following conditions even though there is no obstacle within the detection range:

- In heavy rain.
- When sensors are very dirty or covered in ice.
- When sensors are covered in snow.
- On rough road surfaces.
- In large buildings with right angles and smooth walls, e.g., in underground garages.
- In heavy exhaust.
- Due to other ultrasound sources, e.g., sweeping machines, high pressure steam cleaners or neon lights.

Malfunction

A Check Control message, refer to page 78, is displayed in the instrument cluster.

On the Control Display, the areas in front of and behind the vehicle are shaded. PDC has failed. Have the system checked.

To ensure full operability:

Keep the sensors clean and free of ice.

When using high-pressure washers, do not spray the sensors for long periods and maintain a distance of at least 12 in/30 cm.

Backup camera

The concept

The backup camera provides assistance in parking and maneuvering backwards. The area behind the vehicle is shown on the Control Display.

Hints

Turning circle lines

- Can be shown in the rearview camera image.
- Show the course of the smallest possible turning circle on a level road.
- Only one turning circle line is displayed when the steering wheel is turned.

Obstacle marking

General information

 Spatially-shaped markings can be shown in the rearview camera image.

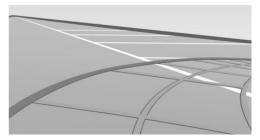

Their colored steps match the markings of the PDC. This simplifies estimation of the distance to the object shown.

Top View

The concept

Top View assists you in parking and maneuvering. The area around the doors and the road area around the vehicle are shown on the Control Display for this purpose.

General information

The image is captured by two cameras integrated in the exterior mirrors and by the backup camera.

The range is approx. 7 ft/2 m to the side and rear.

In this way, obstacles up to the height of the exterior mirrors are detected early.

- The static, red turning circle line shows the space needed to the side of the vehicle when the steering wheel is turned all the way.
- The variable, green pathway line assists you in assessing the amount of space actually needed to the side of the vehicle.
 - The pathway line is dependent on the current steering angle and is continuously adjusted with the steering wheel movement.

"Parking aid lines"

Turning circle and pathway lines are displayed.

System limits

Top View cannot be used in the following situations:

- With a door open.
- With the tailgate open.
- With an exterior mirror folded in.
- In poor light.

A Check Control message is displayed in some of these situations.

Head-up Display

The concept

This system projects important information into the driver's field of vision, e.g., the speed. In this way, the driver can get information without averting his or her eyes from the road.

Display visibility

The visibility of the displays in the Head-up Display is influenced by:

- Certain sitting positions.
- Objects on the cover of the Head-up Display.
- Sunglasses with certain polarization filters.
- Wet roads.
- Unfavorable light conditions.

The programs can be combined as necessary.

Air flow, manual

Turn the wheel to set the desired air volume.

The higher the rate, the more effective the heating or cooling will be.

The air flow of the automatic climate control may be reduced automatically to save battery power.

AUTO program

Press the button.

Air flow, air distribution, and temperature are controlled automatically.

Depending on the selected temperature and outside influences, the air is directed to the windshield, side windows, upper body, and into the footwell.

The cooling function, refer to page 125, is switched on automatically with the AUTO program.

Recirculated-air mode

You can respond to unpleasant odors or pollutants in the immediate environment by temporarily suspending the supply of outside air. The system then recirculates the air currently within the vehicle.

Press the button repeatedly to select an operating mode:

- ▶ LED off: outside air flows in continuously.
- LED on, recirculated-air mode: the supply of outside air into the vehicle is permanently blocked.

If the windows fog over, switch off recirculated-air mode and increase the air volume, if necessary.

Continuous recirculated-air mode

The recirculated-air mode should not be used for an extended period of time, as the air quality inside the vehicle deteriorates steadily.

Temperature

Turn the wheel to set the desired temperature.

The automatic climate control reaches this temperature as quickly as possible, if necessary by increasing the cooling or heating output, and then keeps it constant.

Avoid rapidly switching between different temperature settings. Otherwise, the automatic climate control will not have sufficient time to adjust the set temperature.

Defrosting windows and removing condensation

Press the button.

Ice and condensation are quickly removed from the windshield and the front side windows.

The air volume can be adjusted when the program is active.

If the windows fog over, also switch on the cooling function.

Cooling function

The passenger compartment can only be cooled with the engine running.

Press the button.

The air is cooled and dehumidified and, depending on the temperature setting, warmed again.

Depending on the weather, the windshield may fog up briefly when the engine is started.

The cooling function is switched on automatically with the AUTO program.

When using the automatic climate control, condensation water, refer to page 146, develops that exits underneath the vehicle.

Rear window defroster

Press the button.

The rear window defroster switches off automatically after a certain period of time.

Switching the system on/off

Switching off

Turn the rotary switch for the air volume, refer to page 125, to 0. The blower and automatic climate control are switched off entirely.

Switching on

Set any air volume.

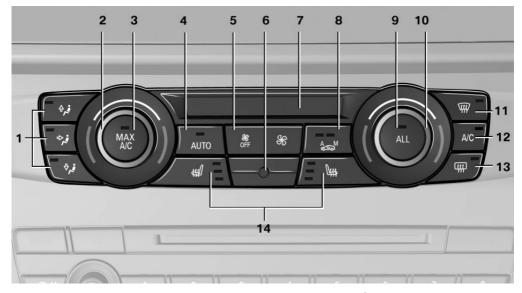

The AUTO program can also be switched on directly via the AUTO button.

Microfilter

The microfilter removes dust and pollen from the incoming air.

This filter should be replaced during scheduled maintenance, refer to page 172, of your vehicle.

Interior equipment

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Integrated universal remote control

The concept

The integrated universal remote control can operate up to 3 functions of remote-controlled systems such as garage door drives or lighting systems. The integrated universal remote control replaces up to 3 different hand-held transmitters. To operate the remote control, the buttons on the interior rearview mirror must be programmed with the desired functions. The hand-held transmitter for the particular system is required in order to program the remote control.

During programming

During programming and before activating a device using the integrated universal remote control, ensure that there are no people, animals, or objects in the range of movement of the remote-controlled device; otherwise, there is a risk of injury or damage.

Also follow the safety instructions of the handheld transmitter. ◄

Before selling the vehicle, delete the stored functions for the sake of security.

Compatibility

If this symbol is printed on the packaging or in the instructions of the system to be controlled, the system is gener-

ally compatible with the integrated universal remote control.

Programming

General information

- 1. Switch on the ignition.
- Initial setup:

Press and hold the left and right button on the interior rearview mirror simultaneously for approximately 20 seconds until the LED on the interior rearview mirror flashes. This erases all programming of the buttons on the interior rearriew mirror.

- 3. Hold the hand-held transmitter for the system to be controlled approx. 1 to 3 in/2.5 to 8 cm away from the buttons on the interior rearview mirror. The required distance depends on the manual transmitter.
- 4. Simultaneously press and hold the button of the desired function on the hand-held transmitter and the button to be programmed on the interior rearview mirror. The LED on the interior rearview mirror will begin flashing slowly.
- Release both buttons as soon as the LED flashes more rapidly. When the LED is flashing faster, this indicates that the button on the interior rearview mirror has been programmed.

If the LED does not flash faster after at least 60 seconds, change the distance between the interior rearview mirror and the hand-held transmitter and repeat the step. Several more attempts at different distances may be necessary. Wait at least 15 seconds between attempts.

Canada: if programming with the handheld transmitter was interrupted, hold down the interior rearview mirror button and repeatedly press and release the hand-held transmitter button for 2 seconds.

6. To program other functions on other buttons, repeat steps 3 to 5.

The systems can be controlled using the interior rearview mirror buttons.

Special feature of the alternatingcode wireless system

If you are unable to operate the system after repeated programming, please check if the system to be controlled features an alternating-code system.

Read the system's operating manual, or press the programmed button on the interior rear-

view mirror longer. If the LED on the interior rearview mirror starts flashing rapidly and then stays lit constantly for 2 seconds, the system features an alternating-code system. Flashing and continuous illumination of the LED will repeat for approximately 20 seconds.

For systems with an alternating-code system, the integrated universal remote control and the system also have to be synchronized.

Please read the operating manual of the system being set up for information on how to synchronize the system.

Synchronizing is easier with the aid of a second person.

To synchronize:

- Park the vehicle within range of the remote-controlled system.
- Program the relevant button on the interior rearview mirror as described.
- Locate and press the synchronizing button on the system being programmed. You have approx. 30 seconds for the next step.
- 4. Hold down the programmed button on the interior rearview mirror for approximately 3 seconds and then release it. If necessary, repeat this work step up to three times in order to finish synchronization. Once synchronization is complete, the programmed function will be carried out.

Reprogramming individual buttons

- 1. Switch on the ignition.
- 2. Press and hold the interior rearview mirror button to be programmed.
- As soon as the interior rearview mirror LED starts flashing slowly, hold the hand-held transmitter for the system to be controlled approx. 1 to 3 in/2.5 to 8 cm away from the buttons on the interior rearview mirror. The required distance depends on the manual transmitter.

- Likewise, press and hold the button of the desired function on the hand-held transmitter.
- Release both buttons as soon as the interior rearview mirror LED flashes more rapidly. When the LED is flashing faster, this indicates that the button on the interior rearview mirror has been programmed.
 The system can then be controlled by the button on the interior rearview mirror.

If the LED does not flash faster after at least 60 seconds, change the distance and repeat the step. Several more attempts at different distances may be necessary. Wait at least 15 seconds between attempts.

Canada: if programming with the handheld transmitter was interrupted, hold down the interior rearview mirror button and repeatedly press and release the hand-held transmitter button for 2 seconds.

Controls

Before operation

Before operating a system using the integrated universal remote control, ensure that there are no people, animals, or objects within the range of movement of the remotecontrolled system; otherwise, there is a risk of injury or damage.

Also follow the safety instructions of the handheld transmitter. ◀

The system, such as the garage door, can be operated using the button on the interior rearview mirror while the engine is running or when the ignition is started. To do this, hold down the button within receiving range of the system until the function is activated. The interior rearview mirror LED stays lit while the wireless signal is being transmitted.

Deleting stored functions

Press and hold the left and right button on the interior rearview mirror simultaneously for ap-

proximately 20 seconds until the LED flashes rapidly. All stored functions are deleted. The functions cannot be deleted individually.

Connecting electrical devices

Hints

Do not plug chargers into the socket
Do not connect battery chargers to the
factory-installed sockets in the vehicle as this
may damage the battery.

✓

Replace the cover after use
Reinsert the lighter or socket cover after use, otherwise objects may get into the lighter socket or fixture and cause a short circuit.

Sockets

Sockets can be used for the operation of electrical devices with the engine running or with the ignition switched on. The total load of all sockets must not exceed 140 watts at 12 volts.

Do not damage the socket by using unsuitable connectors.

Front center console

Remove the cover.

Center armrest

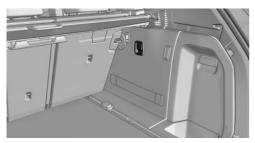

Remove the cover.

Rear center console

Remove the cover.

In the cargo area

The socket is located on the right side in the cargo area.

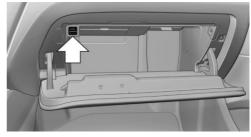

USB interface for data transfer

The concept

Connection for importing and exporting data on USB devices, e.g.:

- Personal Profile settings, refer to page 34.
- Music collection, see user's manual for Navigation, Entertainment and Communication.
- Importing trips, see user's manual for Navigation, Entertainment, Communication.

Without Professional navigation system or TV: at a glance

The USB interface is located in the glove compartment.

With Professional navigation system or TV: at a glance

The USB interface is located in the center armrest.

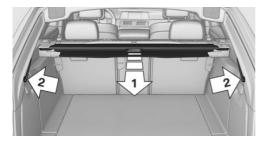

Notes

Observe the following when connecting:

- Do not use force when plugging the connector into the USB interface.
- Do not connect devices such as fans or lamps to the USB interface.
- Do not connect USB hard drives.
- Do not use the USB interface to recharge external devices.

Hook the cargo cover on both sides
Hook the cargo cover on both sides to
prevent damaging the cover.

◄

Do not deposit heavy objects

Do not deposit heavy or hard objects on
the trunk cover. Otherwise, they could endanger occupants during braking and evasive maneuvers, for example. ◄

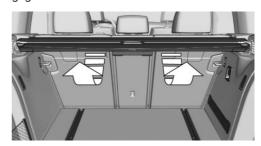

Do not let the trunk cover snap back into place

Do not allow the trunk cover to snap back into place; this can damage it. ◀

Removing and inserting

Cargo cover without partition net: Removing

The cover can be removed to load bulky luggage.

Reach under the cover and turn it upward, arrows. Pull the cover back horizontally.

Cargo cover with partition net: Removing

The cover can be removed to load bulky luggage.

 Press the button, arrow 1, to unlock the cover.

2. Pull the cover back, arrow 2.

Installing

Slide the cover forward horizontally into the two side brackets until it audibly latches.

The red warning fields disappear in the case of a cover with partition net.

Tug on the cover to check if it is properly locked in place.

Enlarging the cargo area

General information

The cargo area can be enlarged by folding down the rear seat backrest.

The rear seat backrest is divided into two parts at a ratio of 60 to 40.

If equipped with through-loading system: the rear seat backrest is divided in the ratio 40–20–40. The sides and the middle section can be folded down separately.

Hints

Danger of pinching

Before folding down the rear seat backrests, ensure that the area of movement of the backrests is clear. In particular, ensure that no one is located in the area of movement and that no one reaches into the area of movement of the rear seat backrests when the middle section is folded down. Otherwise, injury or damage may result.

Lock the rear seat backrests in position Before mounting child restraint fixing systems, place the seat backrest as far as possible at an angle at which the child seat is resting firmly against the backrest and all backrests can be locked securely in place.

Otherwise, the child seat will not be as stable as it should be, and there is increased danger of injury due to unexpected movement of the seat backrest.

Ensure that the lock is securely engaged When folding back the backrest, be sure that it locks in place securely. When this happens the red warning field on the seat disappears. If it is not properly engaged, transported cargo could enter the passenger compartment during braking or evasive maneuvers and endanger the vehicle occupants.

Using the middle safety belt
If the middle safety belt in the rear is
used, the larger section of the backrest must
be locked. Otherwise, the safety belt will not
have a restraining effect.

Folding down the sides

The right side can be folded down separately. The left side can be folded down in combination with the middle section.

Reach into the recess and pull forward.

Folding down the middle section

Reach into the recess and pull forward.

Partition net

A

Do not let the partition net snap back into place

Do not allow the partition net to snap back into place; otherwise, there is a danger of injury and the partition net could be damaged. ◀

With a normal cargo area

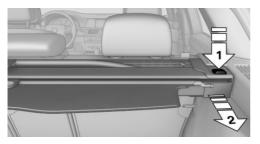

- 1. Fold open the rear covers on the headliner.
- 2. Pull the partition net out of the case by the strap.
- Insert the bars into the brackets on both sides in the headliner toward the front, arrow. This is best performed from the rear seat.

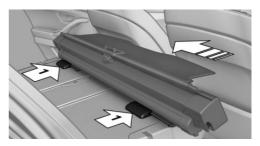

If the partition net is no longer needed: proceed in reverse order.

With an enlarged cargo area

- 1. Fold down the entire rear seat backrest.
- 2. Press the button, arrow 1, to unlock the case on both sides.

Pull the case rearward out of the two side brackets, arrow 2. Make sure not to tilt it in the process. 4. Slide the case all the way into the guides, arrows 1, on the backs of the backrests.

- Fold open the front covers on the headliner.
- 6. Carefully pull out the partition net and insert it into the brackets as in the normal cargo area, refer to page 137.

If the partition net is no longer needed: proceed in reverse order.

Finally, slide the case forward into the two brackets on the sides, until it engages. The red warning fields disappear.

Storage compartments

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Notes

No loose objects in the passenger compartment

Do not stow any objects in the passenger compartment without securing them; otherwise, they may present a danger to occupants for instance during braking and avoidance maneuvers.

Do not place anti-slip mats on the dashboard

Do not place anti-slip mats on the dashboard. The mat materials could damage the dashboard. ◀

Storage compartments

The following storage compartments are available in the vehicle interior:

- Glove compartment on the front passenger side, refer to page 138.
- Storage compartment in the front center armrest, refer to page 139.
- Compartments in the doors.
- Pockets on the backrests of the front seats.
- Net in the front passenger footwell.

Glove compartment

Connection for an external audio device

An external audio device, e.g., an MP3 player, can be connected via the AUX-In connector in the center armrest.

Description, see user's manual for Navigation, Entertainment and Communication.

Cupholders

Hints

Shatter-proof containers and no hot drinks

Use light and shatter-proof containers and do not transport hot drinks. Otherwise, there is the increased danger of injury in an accident. ◄

Unsuitable containers

Do not forcefully push unsuitable containers into the cupholders. This may result in damage. ◄

Front

Rear

In the center armrest.

Pull the center armrest forward at the strap.

To open: press the button.

To close: push both covers back in, one after the other.

Pushing back the covers

Push back the covers before folding up
the center armrest; otherwise, the cupholder
could become damaged.

Clothes hooks

The clothes hooks are located in the grab handles in the rear.

Do not obstruct view
When suspending clothing from the hooks, ensure that it will not obstruct the driver's vision.

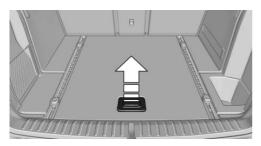

✓

No heavy objects

Do not hang heavy objects from the hooks; otherwise, they may present a danger to passengers during braking and evasive maneuvers.

Storage compartments in the cargo area

Storage space under the cargo floor cover

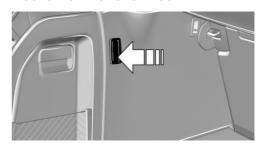

Raise the cargo floor panel. The storage space under the cargo floor panel is subdivided.

Two additional subdividers can be inserted to partition it further.

Storage compartment on the right side

A waterproof storage compartment is available on the right side of the cargo area floor.

Hooks/multi-function hook

Multi-function hooks are available on the left and right cargo area walls.

Retaining strap

A retaining strap is available on the right side trim for fastening small objects.

Net

Smaller objects can be stored in the net on the left side of the cargo area.

Left side storage compartment

To open: pull the handle.

Lashing eyes in the cargo area

To secure the cargo, refer to page 148, there are lashing eyes in the cargo area.

Lashing eyes in the cargo area with rail

To secure the cargo, refer to page 148, there are lashing eyes in the cargo area.

Reversible floor panel

The bottom of the cargo floor panel is coated with a water- and dirt-resistant finish.

Fold the cargo floor panel up, remove it and flip it over.

Hook on the bottom of the cargo floor panel: for easier loading, the raised cargo floor panel can be secured on the edge of the roof with the hook.

Cargo net, FlexNet

To secure the cargo, refer to page 148, the flexible cargo net can also be used.

Folding box

A folding box is located under the cargo area floor.

Driving tips

This chapter provides you with information useful in dealing with specific driving and operating modes.

Things to remember when driving

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Breaking-in period

General information

Moving parts need to be broken in to adjust to each other.

The following instructions will help achieve a long vehicle life and good economy.

Engine and differential

Always obey the official speed limit.

Up to 1,200 miles/2,000 km

Do not exceed the maximum engine and road speed:

For gasoline engine 4,500 rpm and 100 mph/160 km/h.

Avoid full load or kickdown under all circumstances.

From 1,200 miles/2,000 km

The engine and vehicle speed can gradually be increased.

Tires

Due to technical factors associated with their manufacture, tires do not achieve their full traction potential until after an initial breakingin period.

Drive conservatively for the first 200 miles/300 km.

Brake system

Brakes require an initial break-in period of approx. 300 miles/500 km to achieve optimized contact and wear patterns between brake discs and brake pads. Drive moderately during this break-in period.

Following part replacement

The same breaking in procedures should be observed if any of the components mentioned above have to be renewed in the course of the vehicle's operating life.

General driving notes

Closing the tailgate

Drive with the tailgate closed
Only drive with the tailgate closed; otherwise, in the event of an accident or braking and evasive maneuvers, passengers and other road users may be injured, and the vehicle may be damaged. In addition, exhaust fumes may enter the passenger compartment.

■

If driving with the tailgate open cannot be avoided:

- Close all windows and the glass sunroof.
- Greatly increase the blower speed.
- Drive moderately.

Hot exhaust system

Hot exhaust system
High temperatures are generated in the exhaust system.

Do not remove the heat shields installed and never apply undercoating to them. Make sure that flammable materials, e. g. hay, leaves, grass, etc. do not come in contact with the hot exhaust system during driving, while in idle position mode, or when parked. Such contact could lead to a fire, and with it the risk of serious personal injury as well as property damage.

Do not touch hot exhaust pipes; otherwise, there is the danger of getting burned.◀

Mobile communication devices in the vehicle

Mobile communication devices in the vehicle

It is advised that you do not use mobile communication devices, e.g., mobile phones, inside the vehicle without connecting them directly to the external antenna. Otherwise, the vehicle electronics and mobile communication devices can interfere with each other. In addition, there is no assurance that the radiation generated during transmission will be discharged from the vehicle interior.◀

Hydroplaning

On wet or slushy roads, a wedge of water can form between the tires and road surface.

This phenomenon is referred to as hydroplaning. It is characterized by a partial or complete loss of contact between the tires and the road surface, ultimately undermining your ability to steer and brake the vehicle.

Hydroplaning

When driving on wet or slushy roads, reduce your speed to prevent hydroplaning. ◄

Driving through water

Drive though calm water only if it is not deeper than 19.6 inches/50 cm, and at this height no faster than walking speed.

Adhere to water depth and speed limitations

Do not exceed this water depth and walking speed; otherwise, the vehicle's engine, the

electrical systems and the transmission may be damaged.◀

Braking safely

Your vehicle is equipped with ABS as a standard feature.

Applying the brakes fully is the most effective way of braking in situations when this is necessary.

The vehicle maintains steering responsiveness. You can still avoid any obstacles with a minimum of steering effort.

Pulsation of the brake pedal and sounds from the hydraulic circuits indicate that ABS is in its active mode.

Objects in the area around the pedals

No objects in the area around the pedals Keep floor mats, carpets, and any other objects out of the area of motion of the pedals; otherwise, the function of the pedals could be impeded while driving

Do not place additional floor mats over existing mats or other objects.

Only use floor mats that have been approved for the vehicle and can be properly fixed in place.

Ensure that the floor mats are securely fastened again after they were removed for cleaning, for example. ◀

Driving in wet conditions

When roads are wet coated with road salt or there is heavy rain, briefly exert gentle pressure on the brake pedal every few miles.

Ensure that this action does not endanger other road users.

The heat generated in this process helps dry the brake discs and pads.

In this way braking efficiency will be available when you need it.

Hills

Drive long or steep downhill gradients in the gear in which the least braking is required. Otherwise, the brake system may overheat, resulting in a reduction in the brake system efficiency.

You can increase the engine's braking effect by shifting down, going all the way to first gear, if necessary.

Avoid load on the brakes
Avoid placing excessive load on the
brake system. Light but consistent brake pressure can lead to high temperatures, brake wear
and possibly even brake failure.

Do not drive in neutral
Do not drive in neutral or with the engine
stopped, as doing so disables engine braking.
In addition, steering and brake assist is unavailable with the engine stopped.

■

Brake disc corrosion

The corrosion on the brake discs and the contamination on the brake pads are furthered by:

- Low mileage.
- Extended periods when the vehicle is not used at all.
- Infrequent use of the brakes.

Corrosion occurs when the minimum pressure that must be exerted by the pads during brake applications to clean the discs is not reached.

Should corrosion form on the brake discs, the brakes will tend to respond with a pulsating effect that generally cannot be corrected.

Condensation under the parked vehicle

When using the automatic climate control, condensation water develops that exits underneath the vehicle.

Traces of water under the vehicle like this are normal.

Driving on poor roads

The vehicle connects four wheel drive to the advantages of a normal truck

Do not drive on unpaved terrain

Do not drive on unpaved terrain; otherwise, the vehicle may be damaged.

✓

For your own safety, for the safety of passengers and of the vehicle, heed the following points:

- Become familiar with the vehicle before starting a trip; do not take risks in driving.
- Adjust the speed to the road surface conditions. The steeper and more uneven the road surface, the slower the speed should be.
- When driving on steep uphill or downhill grades: add engine oil and coolant up to near the MAX mark. Uphill and downhill grades can be traveled up to no more than 50 %.
- On steep downhill grades, use Hill Descent Control HDC, refer to page 108.
 Starting out is possible on uphill grades up to 30 %. The permissible side tilt is 30 %.
- Avoid contact of the bottom of the body with the ground.
 - The ground clearance is no more than 7.8 inches/20 cm and can vary according to the loading condition.
- When wheels continue to turn, depress the accelerator so that driving stability control systems can distribute the driving force to the wheels. Activate DTC Dynamic Traction Control if available

After a trip on poor roads

After a trip on poor roads, check wheels and tires for damage to maintain driving safety. Clear heavy soiling from the body.

Loading

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Hints

Overloading the vehicle

To avoid exceeding the approved carrying capacity of the tires, never overload the vehicle. Overloading can lead to overheating and increases the rate at which damage develops inside the tires. This could result in a sudden loss of tire inflation pressure.

No fluids in the trunk

Make sure that fluids do not leak into the trunk; otherwise, the vehicle may be damaged.

■

Determining the load limit

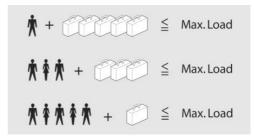

- Locate the following statement on your vehicle's placard:
 - The combined weight of occupants and cargo should never exceed XXX kg or YYY lbs. Otherwise, damage to the

- vehicle and unstable driving situations may result.
- Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- Subtract the combined weight of the driver and passengers from XXX kilograms or YYY pounds.
- The resulting figure equals the available amount of cargo and luggage load capacity.

For example, if the YYY amount equals 1,000 lbs and there will be four 150 lbs passengers in your vehicle, the amount of available cargo and luggage load capacity is 400 lbs: 1,000 lbs minus 600 lbs = 400 lbs.

 Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

Load

The maximum load is the sum of the weight of the occupants and the cargo.

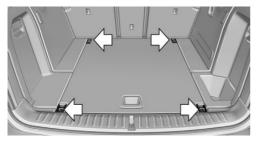

The greater the weight of the occupants, the less cargo that can be transported.

Stowing cargo

- Cover sharp edges and corners on the cargo.
- Heavy cargo: stow as far forward as possible, directly behind and at the bottom of the rear passenger seat backrests.
- Very heavy cargo: when the rear seat is not occupied, secure each of the outer safety belts in the opposite buckle.
- ▶ If necessary, fold down the rear backrests to stow cargo.
- Do not stack cargo above the top edge of the backrests.
- Use the cargo area partition net, refer to page 136, to protect passengers. Make sure that objects cannot penetrate the cargo area partition net.

Securing cargo

Lashing eyes in the cargo area

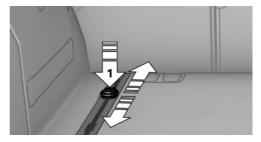

To secure the cargo there are four lashing eyes in the cargo area.

Lashing eyes in the cargo area with rails

To secure the cargo, there are four movable lashing eyes in the cargo area.

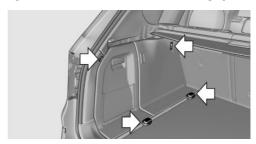

To slide the lashing eyes, press the button, arrow 1. Make sure that the lashing eyes latch at the new position.

If available, the lashing eyes are located under the cargo floor cover in the cargo area. They can be inserted into the openings in the rails.

Cargo net, FlexNet

The flexible cargo net is hooked into eyes and secures the cargo in the cargo area. The storage net can be attached to the following eyes:

- Lashing eyes on the rail system.
- Eyes on the cargo area wall.

The eyes are located on both sides of the cargo area.

Securing cargo

- Smaller and lighter items: secure with retaining straps or with a cargo net or draw straps.
- Larger and heavy objects: secure with cargo straps.

Cargo straps, cargo netting, retaining straps or draw straps on the lashing eyes in the cargo area.

Securing cargo

Always position and secure the cargo as described above; otherwise, it can endanger the car's occupants if sudden braking or swerving becomes necessary.

Heavy or hard objects should not be carried loose inside the car; otherwise, they could be thrown around as a result of hard braking, sudden swerves, etc., and endanger the occupants.◀

Roof-mounted luggage rack

Note

Installation only possible with roof rack.
Roof racks are available as special accessories.

Attachment to the rack

Follow the installation instructions of the roof rack.

Mounting

Be sure that adequate clearance is maintained for tilting and opening the glass sunroof.

Loading

Because roof racks raise the vehicle's center of gravity when loaded, they have a major effect on vehicle handling and steering response.

Therefore, note the following when loading and driving:

- Do not exceed the approved roof/axle loads and the approved gross vehicle weight.
- Distribute the roof load uniformly.
- The roof load should not be too large in area.
- Always place the heaviest pieces on the bottom.
- Secure the roof luggage firmly, e.g., tie with ratchet straps.
- Do not let objects project into the opening path of the tailgate.
- Drive smoothly. Avoid sudden acceleration and braking maneuvers. Take corners gently.

Saving fuel

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

General information

Your vehicle contains advanced technology for the reduction of fuel consumption and emissions.

Fuel consumption depends on a number of different factors.

The implementation of certain measures, driving style and regular maintenance can have an influence on fuel consumption and on the environmental impact.

Remove unnecessary cargo

Additional weight increases fuel consumption.

Remove attached parts following use

Remove auxiliary mirrors, roof or rear luggage racks which are no longer required following use.

Attached parts on the vehicle impair the aerodynamics and increase the fuel consumption.

Close the windows and glass sunroof

Driving with the glass sunroof and windows open results in increased air resistance and raises fuel consumption.

Tires

General information

Tires can affect fuel consumption values in various ways, for instance fuel consumption can be influenced by the size of the tires.

Check the tire inflation pressure regularly

Check and, if necessary, correct the tire inflation pressure at least twice a month and before starting on a long trip.

Low tire inflation pressure increases rolling resistance and thus raises fuel consumption and tire wear.

Drive away without delay

Do not wait for the engine to warm-up while the vehicle remains stationary. Start driving right away, but at moderate engine speeds.

This is the fastest way for the cold engine to reach its operating temperature.

Look well ahead when driving

Avoid unnecessary acceleration and braking.

By maintaining a suitable distance to the vehicle driving ahead of you.

Driving smoothly and looking ahead reduces fuel consumption.

Use coasting conditions

When approaching a red light, take your foot off the accelerator and let the vehicle coast to a halt.

On a downhill gradient, take your foot off the accelerator and let the vehicle roll.

The flow of fuel is interrupted while coasting.

Switch off the engine during longer stops

Switch off the engine during longer stops, e.g., at traffic lights, railroad crossings or in traffic congestion.

Automatic Engine Start/Stop Function

The Auto Start/Stop function of your vehicle automatically switches off the engine during a stop.

If the engine is switched off and then restarted rather than leaving the engine running constantly, fuel consumption and emissions are reduced. Savings can begin within a few seconds of switching off the engine.

Using this system can cause certain components of the vehicle to become worn prematurely.

In addition, fuel consumption is also determined by other factors, such as driving style, road conditions, maintenance or environmental factors.

Switch off any functions that are not currently needed

Functions such as seat heating and the rear window defroster require a lot of energy and consume additional fuel, especially in city and stop-and-go traffic.

Therefore, switch off these functions if they are not actually needed.

Have maintenance carried out

Have vehicles maintained regularly to achieve optimal vehicle economy and operating life. Have the maintenance carried out by your service center.

Please also note the BMW Maintenance System, refer to page 172.

ECO PRO

The concept

ECO PRO supports a driving style that saves on fuel consumption. For this purpose, the engine control and comfort functions, e. g. the climate control output, are adjusted.

The extension of the range that is achieved as a result can be displayed in the instrument cluster.

Activating ECO PRO

Press button repeatedly until ECO PRO is displayed in the instrument

Configuring ECO PRO

The climate control is adjusted to be fuel-efficient.

By making a slight change to the set temperature, or slowly adjusting the rate of heating or cooling of the passenger compartment, fuel consumption can be economized.

The outputs of the seat heater and the exterior mirror heating are also reduced.

The exterior mirror heating is made available when outside temperatures are very cold.

ECO PRO potential

The percentage of potential savings that can be achieved with the current configuration is displayed.

Display in the instrument cluster

ECO PRO bonus range

An extension of the range can be achieved by an adjusted driving style.

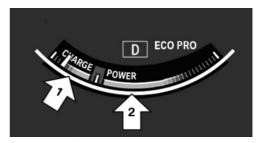

This may be displayed as the bonus range in the instrument

cluster.

The bonus range is shown in the range display.

The bonus range is automatically reset every time the vehicle is refueled.

Driving style

In the tachometer, a mark in the bar display indicates the current efficiency of the driving style.

Mark in the CHARGE area, arrow 1: display for energy recovered by coasting or when braking.

Mark in the POWER area, arrow 2: display when accelerating.

The efficiency of the driving style is shown by the color of the bar:

- ▶ Blue display: efficient driving style as long as the mark moves within the blue range.
- ▶ Gray display: adjust driving style, e. g. by backing off the accelerator pedal.

The display switches to blue as soon as all conditions for fuel-economy-optimized driving are met.

ECO PRO Tip - driving instruction

The arrow indicates that the driving style can be adjusted to be more fuel efficient by backing off the accelerator for instance.

Note

The driving style display and ECO PRO tips in the instrument cluster appear when the ECO PRO display is activated.

Mobility

In order to always ensure your mobility, you will find important information on operating fluids, wheels and tires, maintenance and Roadside Assistance in the following.

Refueling

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

General information

Refuel promptly
Refuel no later than at a range of
30 miles/50 km, or operation of the engine is
not ensured and damage may occur.

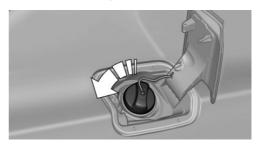

Fuel cap

Opening

 Briefly press the rear edge of the fuel filler flap.

2. Turn the fuel cap counterclockwise.

3. Place the fuel cap in the bracket attached to the fuel filler flap.

Closing

- Fit the cap and turn it clockwise until you clearly hear a click.
- Close the fuel filler flap.

Do not pinch the retaining strap
Do not pinch the retaining strap attached
to the cap; otherwise, the cap cannot be
closed properly and fuel vapors can escape.
A message is displayed if the cap is loose or

missing.◀

Manually unlocking fuel filler flap

In the event of an electrical malfunction, for example.

1. Open the cover on the right side trim.

2. Pull the green knob with the fuel pump symbol. This releases the fuel filler flap.

Observe the following when refueling

The fuel tank is full when the filler nozzle clicks off the first time.

Do not overfill the fuel tank
Do not overfill the fuel tank; otherwise
fuel may escape, causing harm to the environment and damaging the vehicle.

✓

Handling fuels
Obey safety regulations posted at the gas station. ◀

Fuel

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Fuel recommendation

Gasoline

For the best fuel economy, the gasoline should be sulfur-free or very low in sulfur content.

Fuels that are marked on the gas pump as containing metal must not be used.

Refuel only with unleaded gasoline without metallic additives.

Do not refuel with any leaded gasoline or gasoline with metallic additives, e. g. manganese or iron, or permanent damage to the catalytic converter and other components. ◀

Fuels with a maximum ethanol content of 10 %, i. e., E10, may be used for refueling. Ethanol should satisfy the following quality standards:

US: ASTM 4806-xx CAN: CGSB-3.511-xx

xx: comply with the current standard in each case.

Do not refuel with ethanol E85 Do not refuel with E85, i.e., fuel with an ethanol content of 85 %, or with Flex Fuel, as this would damage the engine and fuel supply system.∢

Gasoline quality

BMW recommends AKI 91.

Minimum fuel grade

BMW recommends AKI 89.

Minimum fuel grade Do not use any gasoline below the minimum fuel grade as this may impair engine performance. ◀

If you use gasoline with this minimum AKI Rating, the engine may produce knocking sounds when starting at high outside temperatures. This has no effect on the engine life.

Fuel quality

The use of poor-quality fuels may result in harmful engine deposits or damage. Additionally, problems relating to drivability, starting and stalling, especially under certain environmental conditions such as high ambient temperature and high altitude, may occur.

If drivability problems are encountered, we recommend switching to a high quality gasoline brand and a higher octane grade — AKI number — for a few tank fills. To avoid harmful engine deposits, it is highly recommended to purchase gasoline from BP or Top Tier retail-

Failure to comply with these recommendations may result in the need for unscheduled maintenance. ◀

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Tire inflation pressure

Safety information

The tire characteristics and tire inflation pressure influence the following:

- The service life of the tires.
- Road safety.
- Driving comfort.

Checking the pressure

Only check the tire inflation pressure when the tires are cold. This means after driving no more than 1.25 miles/2 km or when the vehicle has been parked for at least 2 hours. When the tires are warm, the tire inflation pressure is higher.

Check the tire inflation pressure regularly Regularly check the tire inflation pressure, and correct it as needed: at least twice a month and before a long trip. If you fail to observe this precaution, you may be driving on tires with incorrect tire pressures, a condition that may not only compromise your vehicle's driving stability, but also lead to tire damage and the risk of an accident.

After correcting the tire inflation pressure:

- Reinitialize the Flat Tire Monitor.
- Reinitialize the Tire Pressure Monitor.

Pressure specifications

The tire inflation pressure table, refer to page 160, contains all pressure specifications for the specified tire sizes at the ambient temperature. Pressure specifications apply to approved tire sizes and recommended tire brands. This information can be obtained from your service center.

To identify the correct tire inflation pressure, please note the following:

- ▶ Tire sizes of your vehicle.
- Maximum permitted driving speed.

Tire inflation pressures up to 100 mph/160 km/h

For speeds of up to 100 mph/160 km/h and for optimum driving comfort, note the pressure values in the tire inflation pressure table, refer to page 160, and adjust as necessary.

These pressure values can also be found on the tire inflation pressure label on the driver's door pillar.

Maximum permissible speed
Do not exceed 100 mph/160 km/h; otherwise, tire damage and accidents may result.◀

Recommendation

Regardless of wear, replace tires at least every 6 years.

Uniform Tire Quality Grading

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example: Treadwear 200; Traction AA; Temperature A

DOT Quality Grades

Treadwear

Traction AA A B C

Temperature A B C

All passenger car tires must conform to Federal Safety Requirements in addition to these grades.

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half, 1 g, times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction

The traction grades, from highest to lowest, are AA, A, B, and C.

Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature

The temperature grades are A, the highest, B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades Band A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Temperature grade for this tire
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

If necessary, have the vehicle towed. ◀

RSC - Run-flat tires

Run-flat tires, refer to page 165, are labeled with a circular symbol containing the letters RSC marked on the sidewall.

M+S

Winter and all-season tires with better cold weather performance than summer tires.

Tire tread

Summer tires

Do not drive with a tire tread depth of less than 0.12 in/3 mm.

There is an increased danger of hydroplaning if the tread depth is less than 0.12 in/3 mm.

Winter tires

Do not drive with a tire tread depth of less than 0.16 in/4 mm.

Below a tread depth of 0.16 in/4 mm, tires are less suitable for winter operation.

Minimum tread depth

Wear indicators are distributed around the tire's circumference and have the legally required minimum height of 0.063 in/1.6 mm.

They are marked on the side of the tire with TWI, Tread Wear Indicator.

Tire damage

General information

Inspect your tires often for damage, foreign objects lodged in the tread, and tread wear.

Notes

Driving over rough or damaged road surfaces, as well as debris, curbs and other obstacles can cause serious damage to wheels, tires and suspension parts. This is more likely to occur with low-profile tires, which provide less cushioning between the wheel and the road. Be careful to avoid road hazards and reduce your speed, especially if your vehicle is equipped with low-profile tires.

Indications of tire damage or other vehicle defects:

- Unusual vibrations during driving.
- Unusual handling such as a strong tendency to pull to the left or right.

Damage can, e. g., be caused by driving over curbs, road damage, or similar things.

In case of tire damage

If there are indications of tire damage, reduce your speed immediately and have the wheels and tires checked right away; otherwise, there is the increased risk of an accident.

Drive carefully to the nearest service center. If necessary, have the vehicle towed.

Otherwise, tire damage can be life-threatening for vehicle occupants and other traffic participants. ◀

Repair of tire damage

For safety reasons, the manufacturer of your vehicle recommends that you do not have damaged tires repaired; they should be replaced. Otherwise, damage can occur as a result.

Changing wheels and tires

Mounting

Information on mounting tires
Have mounting and balancing performed only by a service center.

If this work is not carried out properly, there is the danger of subsequent damage and related safety hazards. ◀

Wheel and tire combination

Information on the correct wheel-tire combination and rim versions for your vehicle can be obtained from your service center.

Incorrect wheel and tire combinations impair the function of a variety of systems such as ABS or DSC.

To maintain good handling and vehicle response, use only tires with a single tread configuration from a single manufacturer.

Following tire damage, have the original wheel and tire combination remounted on the vehicle as soon as possible.

Approved wheels and tires

The manufacturer of your vehicle recommends that you use only wheels and tires that have been approved for your particular vehicle model.

For example, despite having the same official size ratings, variations can lead to body contact and with it, the risk of severe accidents.

The manufacturer of your vehicle cannot evaluate non-approved wheels and tires to determine if they are suited for use, and therefore cannot ensure the operating safety of the vehicle if they are mounted. ◀

Recommended tire brands

For each tire size, the manufacturer of your vehicle recommends certain tire brands. These can be identified by a star on the tire sidewall.

With proper use, these tires meet the highest standards for safety and handling.

New tires

Due to technical factors associated with their manufacture, tires do not achieve their full traction potential until after an initial breakingin period.

Drive conservatively for the first 200 miles/300 km.

Retreaded tires

The manufacturer of your vehicle does not recommend the use of retreaded tires.

Retreaded tires

Possibly substantial variations in the design and age of the tire casing structures can limit service life and have a negative impact on road safety.◀

Winter tires

The manufacturer of your vehicle recommends winter tires for winter roads or at temperatures below $+45 \, ^{\circ}\text{F/+7} \, ^{\circ}\text{C}$.

Although so-called all-season M+S tires do provide better winter traction than summer tires, they do not provide the same level of performance as winter tires.

Maximum speed of winter tires

If the maximum speed of the vehicle is higher than the permissible speed for the winter tires, then display a corresponding sign in the field of vision. You can obtain this sign from the tire specialist or from your service center.

Maximum speed for winter tires
Do not exceed the maximum speed for
the winter tires; otherwise, tire damage and accidents can occur.

Run-flat tires

If you are already using run-flat tires, for your own safety you should replace them only with the same kind. No spare tire is available in the case of a flat tire. Your service center will be glad to advise you.

Rotating wheels between axles

The manufacturer of your vehicle advises against switching wheels between the front and rear axles.

This can impair the handling characteristics.

Storage

Store wheels and tires in a cool, dry place with as little exposure to light as possible.

Always protect tires against all contact with oil, grease and fuels.

Do not exceed the maximum tire inflation pressure indicated on the side wall of the tire.

Run-flat tires

Label

RSC label on the tire sidewall.

The wheels are composed of special rims and tires that are self-supporting, to a limited degree.

The support of the sidewall allows the tire to remain drivable to a restricted degree in the event of a pressure loss.

Continued driving with a damaged tire, refer to page 102.

Continued driving with a damaged tire, refer to page 99.

Changing run-flat tires

For your own safety, only use run-flat tires. No spare tire is available in the case of a flat tire. Your service center will be glad to advise you.

Snow chains

Fine-link snow chains

Only certain types of fine-link snow chains have been tested by the manufacturer of your vehicle, classified as road-safe and recommended.

Consult your service center for more information.

Use

Use only in pairs on the rear wheels, equipped with the tires of the following size:

- ≥ 205/65 R 17.
- 225/60 R 17.
- > 245/50 R 18.
- ▶ 245/45 R 19.

No snow chains on size 245/55 R 17 tires

Do not mount snow chains on size

245/55 R 17 tires; otherwise, the vehicle may become damaged.◀

Follow the chain manufacturer's instructions.

Make sure that the snow chains are always sufficiently tight. Retighten as needed according to the chain manufacturer's instructions.

Do not initialize the Flat Tire Monitor after mounting snow chains, as doing so may result in incorrect readings.

Do not initialize the Tire Pressure Monitor after mounting snow chains, as doing so may result in incorrect readings.

When driving with snow chains, briefly activate Dynamic Traction Control if necessary.

Maximum speed with snow chains

Do not exceed a speed of 30 mph/50 km/h when using snow chains.

Hints

Working in the engine compartment
Never attempt to perform any service or
repair operations on your vehicle without the
necessary professional technical training.

If you are unfamiliar with the statutory guidelines, have any work on the vehicle performed only by a service center.

If this work is not carried out properly, there is the danger of subsequent damage and related safety hazards.◀

Never reach into the engine compartment

Never reach into the intermediate spaces or gaps in the engine compartment. Otherwise, there is risk of injury, e.g., from rotating or hot parts.◀

1. Pull the lever.

Press the release handle and open the hood.

3. Be careful of protruding parts on the hood.

Danger of injury when the hood is open
There is a danger of injury from protruding parts when the hood is open.

◄

Closing the hood

Let the hood drop from a height of approx. 16 in/40 cm and push down on it to lock it fully.

Make sure you hear the engine compartment lid engage.

Hood open when driving
If you see any signs that the hood is not
completely closed while driving, pull over immediately and close it securely.

Danger of pinching
Make sure that the closing path of the hood is clear; otherwise, injuries may result.

Engine oil

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

General information

The engine oil consumption is dependent on the driving style and driving conditions. When a sporty driving style is used, the engine oil consumption, for example, is clearly higher.

Therefore, regularly check the engine oil level after refueling.

Checking the oil level electronically

Status display

The concept

The oil level is monitored electronically during driving and shown on the Control Display.

If the oil level reaches the minimum level, a check control message is displayed.

Requirements

Depending on the previous displays, the status display is displayed when the engine is running or after the vehicle has been driven for at least 30 minutes.

Displaying the oil level

- "Vehicle status"

"Engine oil level"

Oil level display messages

Different messages appear on the display depending on the oil level. Pay attention to these messages.

If oil level is too low, immediately add 1 US quart/liter of oil.

Take care not to add too much engine oil.

In the detailed measurement the oil level is checked and displayed via a scale.

During the measurement, the idle speed is increased somewhat.

General information

A detailed measurement is only possible with certain engines.

Requirements

- Automatic transmission: selector lever in transmission position N or P and accelerator not depressed.
- Vehicle is on a level road and the engine is running at operating temperature.

Performing a detailed measurement

In order to perform a detailed measurement of the engine oil level:

- 1. "Vehicle Info"
- "Vehicle status"

- "Measure engine oil level"
- "Start measurement"

The oil level is checked and displayed via a scale.

Duration: approx. 1 minute.

Viscosity grades for engine oils

When selecting an engine oil, ensure that the engine oil belongs to one of the viscosity grades SAE 0W-40, SAE 0W-30, SAE 5W-40, and SAE 5W-30 or malfunctions or engine damage may occur.

The engine oil quality is critical for the life of the engine.

Some types of oils in some cases are not available in all countries.

Approved oil types

Gasoline engine

BMW High Performance SAE 5W-30.

BMW Longlife-01.

BMW Longlife-01 FE.

Additional information about the approved types of oils can be requested from the service center.

Alternative oil types

If the approved engine oils are not available, up to 1 US quart/liter of an oil with the following specification can be added:

Gasoline engine

Coolant

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

General information

Danger of burns from hot engine
Do not open the cooling system while
the engine is hot; otherwise, escaping coolant
may cause burns. ◄

Suitable additives
Only use suitable additives; otherwise, engine damage may occur. The additives are harmful to your health.

✓

Coolant consists of water and additives.

Not all commercially available additives are suitable for your vehicle. Ask your service center for suitable additives.

Coolant level

Checking

- 1. Let the engine cool.
- Turn the cap of the expansion tank slightly counterclockwise to allow any excess pressure to dissipate, and then open it.

The coolant level is correct if it lies between the minimum and maximum marks in the filler neck.

- 4. If the coolant is low, slowly add coolant up to the specified level; do not overfill.
- 5. Turn the cap until there is an audible click.
- 6. Have the cause of the coolant loss eliminated as soon as possible.

Disposal

Comply with the relevant environmental protection regulations when disposing of coolant and coolant additives.

Maintenance

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

BMW Maintenance System

The maintenance system directs you to required maintenance measures and thereby supports you in maintaining road safety and the operational reliability of the vehicle.

Condition Based Service CBS

Sensors and special algorithms take into account the driving conditions of your vehicle. Based on this, Condition Based Service determines the maintenance requirements.

The system makes it possible to adapt the amount of maintenance you need to your user profile.

Detailed information on service requirements, refer to page 82, can be displayed on the Control Display.

Service data in the remote control

Information on the required maintenance is continuously stored in the remote control. Your service center will read out this data and suggest the right array of service procedures for your vehicle.

Therefore, hand your service specialist the remote control with which the vehicle was driven most recently.

Storage periods

Storage periods during which the vehicle battery was disconnected are not taken into account.

If this occurs, have a service center update the time-dependent maintenance procedures, such as checking brake fluid and, if necessary, changing the engine oil and the microfilter/activated-charcoal filter.

Service booklet

Perform maintenance work at the service center, and record the work in the service booklet. The entries are proof of regular maintenance.

Service and Warranty Information Booklet for US models and Warranty and Service Guide Booklet for Canadian models

Please consult your Service and Warranty Information Booklet for US models and Warranty and Service Guide Booklet for Canadian models for additional information on service requirements.

Maintenance and repair should be performed by your service center. Make sure to have regular maintenance procedures recorded in the vehicle's Service and Warranty Information Booklet for US models, and in the Warranty and Service Guide Booklet for Canadian models. These entries are proof of regular maintenance.

Socket for OBD Onboard Diagnosis

Position

There is an OBD socket on the driver's side for checking the primary components in the vehicle emissions.

Emissions

The warning lamp lights up:

▶ The warning lamp flashes under certain circumstances:

This indicates that there is excessive misfiring in the engine.

Reduce the vehicle speed and have the system checked immediately; otherwise, serious engine misfiring within a brief period can seriously damage emission control components, in particular the catalytic converter.

Fuel cap

The indicator lamp lights up.

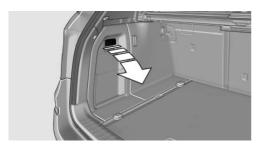

If the fuel cap is not properly tightened, the OBD system may conclude that fuel vapor is escaping. If the cap is then tightened, the display should go out in a short time.

Replacing components

Wiper blade replacement

General information

Do not fold down the wipers without wiper blades

Do not fold down the wipers if wiper blades have not been installed; this may damage the windshield.◀

Front: Replacing the wiper blades

- 1. To change the wiper blades, fold up, refer to page 70, the wiper arms.
- 2. Fold up the wipers.

- Position the wiper blade in a horizontal position.
- 4. Remove the wiper blade toward one side.

- Insert the new wiper blade in reverse order of removal until it locks in place.
- 6. Fold down the wipers.

Rear: replacing the wiper blades

 Lift off the wiper fully and pull off the wiper blade, arrow.

- Attach a new wiper blade. It must engage audibly.
- 3. Fold down the wipers.

Lamp and bulb replacement

Hints

Lamps and bulbs

Lamps and bulbs make an essential contribution to vehicle safety.

The manufacturer of the vehicle recommends that you entrust corresponding procedures to the service center if you are unfamiliar with them or they are not described here.

You can obtain a selection of replacement bulbs at the service center.

Danger of burns
Only change bulbs when they are cool;
otherwise, there is the danger of getting
burned.

✓

Working on the lighting system
When working on the lighting system,
you should always switch off the lights affected to prevent short circuits.

To avoid possible injury or equipment damage when replacing bulbs, observe any instructions provided by the bulb manufacturer. ◀

Do not perform work/bulb replacement on xenon headlamps

Have any work on the xenon lighting system, including bulb replacement, performed only by a service center. Due to the high voltage present in the system, there is the danger of fatal injuries if work is carried out improperly. ◀

A

Do not touch the bulbs

Do not touch the glass of new bulbs with your bare hands, as even minute amounts of contamination will burn into the bulb's surface and reduce its service life.

Use a clean tissue, cloth or something similar, or hold the bulb by its base. ◀

Light-emitting diodes (LEDs)

Light-emitting diodes installed behind a cover serve as the light source for controls, display elements and other equipment.

These light-emitting diodes, which are related to conventional lasers, are officially designated as Class 1 light-emitting diodes.

Do not remove the covers

Do not remove the covers, and never stare into the unfiltered light for several hours;

Headlamp glass

Condensation can form on the inside of the external lamps in cool or humid weather. When driving with the light switched on, the condensation evaporates after a short time. The head-lamp glasses do not need to be changed.

otherwise, irritation of the retina could result. ◄

If the headlamps do not dim despite driving with the light switched on, increasing humidity forms, e. g. water droplets in the light, have the service center check this.

Headlamp setting

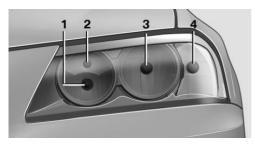

The headlamp adjustments can be affected by changing lamps and bulbs. Therefore after a

change, have the headlamp setting checked and corrected by Service.

- 1. Open the hood, refer to page 167.
- Unscrew the cap counterclockwise and remove it.

- Carefully pull out the connector.
- 4. Pull the bulb off the connector and insert the new bulb.
- Insert the new bulb and attach the cover in the reverse order.

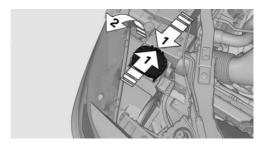

High beams/headlamp flasher and parking lamps

Follow the general instructions on Lamps and bulbs, refer to page 175.

High beams/headlamp flasher: 55-watt bulb, H7.

Parking lamps: 5-watt bulb, W5W.

- 1. Open the hood, refer to page 167.
- Press, arrow 1, and fold out the cover, arrow 2.

3. Remove the bulb holder.

The lower bulb is the high beam and headlamp flasher, and the upper bulb is the parking lamp.

- 4. Pull off the bulb.
- 5. Insert the new bulb and attach the cover in the reverse order.

Xenon headlamps

Because of the long life of these bulbs, the likelihood of failure is very low. Switching the lamps on and off frequently shortens their life.

If a xenon bulb fails, switch on the front fog lamps and continue the trip with great care. Comply with local regulations.

Do not perform work/bulb replacement on xenon headlamps

Have any work on the xenon lighting system, including bulb replacement, performed only by a service center. Due to the high voltage present in the system, there is the danger of fatal injuries if work is carried out improperly. ◄

For checking and adjusting headlamp aim, please contact your BMW center.

Xenon headlamps

Low beams and high beams are designed with xenon technology.

The parking lamps and daylight running lights are made using LED technology.

Contact your service center in the event of a malfunction.

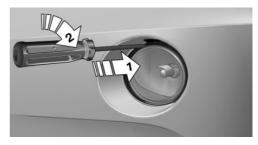

Front fog lamps

Follow the general instructions on Lamps and bulbs, refer to page 175.

Front fog lamps in vehicles equipped with Adaptive Light Control: 55-watt bulb, H11.

Front fog lamps without Adaptive Light Control: 35-watt bulb, H8.

 Insert the screwdriver from the onboard vehicle tool kit, with the flat side facing outward, past the removal hook and onto the clip, arrow 1.

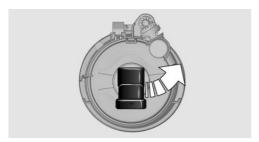

- 2. Turn the screwdriver by 90°, arrow 2.
- Press the removal hook upward, arrow, and remove the front fog lamp from the front using the hook.

4. Detach the connector.

5. Turn the bulb bracket and remove it.

- 6. Remove the bulb and replace it.
- 7. Proceed in reverse order to insert the front fog lamp. Note the guide rails in doing so.

Turn signal

Follow the general instructions on Lamps and bulbs, refer to page 175.

The turn signals are located next to each low beam in the engine compartment.

21-watt bulb, PY 21W.

- 1. Open the hood, refer to page 167.
- Unscrew the cap counterclockwise and remove it carefully.

The bulb is attached to the cap.

- Turn the bulb clockwise to remove it.
- Insert the new bulb and attach the cover in the reverse order.

Lateral turn signals

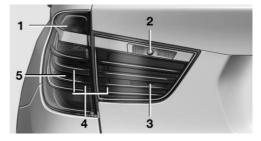

Follow the general instructions on Lamps and bulbs, refer to page 175.

These lamps are made using LED technology.

Please contact your service center in the event of a malfunction.

Tail lamps, bulb replacement

Turn signal, tail lamp and brake lamp

Follow the general instructions on Lamps and bulbs, refer to page 175.

21-watt bulb, P21W.

With an Adaptive Light Control or xenon headlamp: tail lamp is designed with LED-technology. Contact your service center in the event of a malfunction.

- 1. Open the tailgate.
- Insert the screwdriver from the onboard vehicle tool kit between the cover and

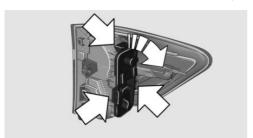

body, push it up, arrow, and remove the cover.

Release the nuts.

- 4. Remove the tail lamp from the body and detach the connector.
- Release three fasteners on the bulb holder and remove bulb holder from the tail lamp.

- Turn the bulb and remove it. The turn signal is the upper bulb and the tail lamp/ brake lamp is the lower bulb on the bulb holder.
- Proceed in the reverse order to insert the new bulb and attach the bulb holder. Make sure that the bulb holder is engaged in all fasteners.

- 8. Connect and install tail lamp.
- Insert cover with the three mountings in the tail lamp. While applying pressure on the top and bottom bracket, slide the cover down to the stop.

Backup lamp and inner brake lamp

Follow the general instructions on Lamps and bulbs, refer to page 175.

Backup lamp: 16-watt bulb, W16W. Inner brake lamp: 21-watt bulb, H21W.

- 1. Open the tailgate.
- Pull out the cover at the recessed grip, arrow.

- 3. Detach the connector.
- Detach the bulb holder from the tail lamp.
 The backup lamp is the upper lamp and the brake lamp is the lower lamp on the bulb holder.
- 5. To replace the backup lamp, pull off the bulb carefully.
 - To replace the brake lamp, push the bulb down and turn it to the left.
- 6. Proceed in the reverse order to insert the new bulb and attach the bulb holder.
 - Ensure that the bulb holder is firmly attached.

Changing wheels

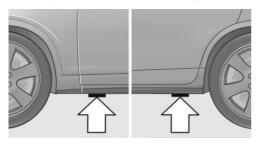

Hints

The vehicle equipment does not include a spare tire.

When using run-flat tires or tire sealants, a tire does not need to be changed immediately in the event of pressure loss due to a flat tire.

The tools for changing wheels are available as accessories from your service center.

Jacking points for the vehicle jack

The jacking points for the vehicle jack are located at the positions shown.

Vehicle battery

Maintenance

The battery is maintenance-free, i.e., the electrolyte will last for the life of the battery.

Your service center will be glad to advise you on questions regarding the battery.

Battery replacement

Use approved vehicle batteries only
Only use vehicle batteries that have been approved for your vehicle by the manufacturer; otherwise, the vehicle could be damaged and systems or functions may not be fully available.

✓

After a battery replacement, have the battery registered on the vehicle by your service cen-

ter to ensure that all comfort functions are fully available and that any Check Control messages of these comfort functions are no longer displayed.

Charging the battery

Note

Do not plug chargers into the socket

Do not connect battery chargers to the
factory-installed sockets in the vehicle as this
may damage the battery.

✓

General information

Make sure that the battery is always sufficiently charged to guarantee that the battery remains usable for its full service life.

The battery may need to be charged in the following cases:

- When making frequent short-distance drives.
- ▶ If the vehicle is not used for prolonged periods, longer than a month.

Starting aid terminals

In the vehicle, only charge the battery via the starting aid terminals, refer to page 184, in the engine compartment with the engine off.

Power failure

After a temporary power loss, some equipment needs to be reinitialized.

Individual settings need to be reprogrammed:

- Seat and mirror memory: store the positions again.
- Time: update.
- Date: update.
- Radio station: saving new, see user's manual for Navigation, Entertainment and Communication.
- Navigation system: wait for the operability of the navigation.

Disposing of old batteries

Have old batteries disposed of by your service center or bring them to a recycling center.

Maintain the battery in an upright position for transport and storage. Secure the battery so that it does not tip over during transport.

Fuses

Notes

Never attempt to repair a blown fuse and do not replace a defective fuse with a substitute of another color or amperage rating; this

could lead to a circuit overload, ultimately resulting in a fire in the vehicle. \blacktriangleleft

Plastic tweezers and information on the fuse types and locations are stored in the fuse box in the cargo area.

In the glove compartment

Replacing fuses

Swing the cover down, arrow.

In the cargo area

Open the cover on the right side trim and remove the sound insulation.

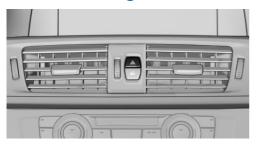

Information on the fuse types and locations is found on a separate sheet.

Breakdown assistance

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Hazard warning flashers

The button is located in the center console.

Intelligent Emergency Request

Requirements

- The radio ready state is switched on.
- ▶ The Assist system is functional.
- The SIM card integrated in the vehicle has been activated.
- A ConnectedDrive contract is available.

General information

Only press the SOS button in an emergency.

Hints

Emergency Request not guaranteed
For technical reasons, the Emergency
Request cannot be guaranteed under unfavorable conditions.

Initiating an Emergency Request

- 1. Press the cover briefly to open it.
- 2. Press the SOS button until the LED in the button lights up.
- ▶ The LED lights up: an Emergency Request was initiated.
 - If the situation allows, wait in your vehicle until the voice connection has been established.
- The LED flashes when a connection to the BMW Response Center has been established.

When the emergency request is received at the BMW Response Center, the BMW Response Center contacts you and takes further steps to help you.

Even if you are unable to respond, the BMW Response Center can take further steps to help you under certain circumstances.

For this purpose, data that are used to determine the necessary rescue measures, such as the current position of the vehicle if it can be established, are transmitted to the BMW Response Center.

If the LED is flashing, but the BMW Response Center can no longer be heard via the speaker, you can nevertheless still be heard for the BMW Response Center.

Initiating an Emergency Request automatically

Under certain conditions, an Emergency Request is automatically initiated immediately after a severe accident. Automatic Collision Notification is not affected by pressing the SOS button.

Warning triangle

The warning triangle is located behind the lefthand cover in the cargo area.

To remove, loosen the bracket.

First aid kit

Note

Some of the articles have a limited service life.

Check the expiration dates of the contents regularly and replace any expired items promptly.

Storage

The first aid kit is located behind the left-hand cover in the cargo area.

Roadside Assistance

Service availability

Roadside Assistance can be reached around the clock in many countries. You can obtain assistance there in the event of a vehicle breakdown.

Roadside Assistance

The Roadside Assistance phone number can be viewed on the iDrive or a connection to Roadside Assistance can be established directly.

Jump-starting

Notes

If the battery is discharged, an engine can be started using the battery of another vehicle and two jumper cables. Only use jumper cables with fully insulated clamp handles.

To prevent personal injury or damage to both vehicles, adhere strictly to the following procedure.

Do not touch live parts

To avoid the risk of potentially fatal injury, always avoid all contact with electrical components while the engine is running.

Preparation

- Check whether the battery of the other vehicle has a voltage of 12 volts. This information can be found on the battery.
- Switch off the engine of the assisting vehicle.
- Switch off any electronic systems/power consumers in both vehicles.

Bodywork contact between vehicles

Make sure that there is no contact between the bodywork of the two vehicles; otherwise, there is the danger of short circuits.

✓

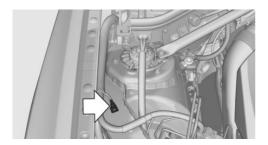

Starting aid terminals

Connecting order
Connect the jumper cables in the correct order; otherwise, there is the danger of injury from sparking.

✓

The so-called starting aid terminal in the engine compartment acts as the battery's positive terminal.

The body ground or a special nut acts as the battery negative terminal.

Connecting the cables

- Pull off the cap of the BMW starting aid terminal.
- Attach one terminal clamp of the positive jumper cable to the positive terminal of the battery, or to the corresponding starting aid terminal of the vehicle providing assistance.
- Attach the terminal clamp on the other end of the cable to the positive terminal of the battery, or to the corresponding starting aid terminal of the vehicle to be started.
- Attach one terminal clamp of the negative jumper cable to the negative terminal of the battery, or to the corresponding engine or body ground of assisting vehicle.
- Attach the second terminal clamp to the negative terminal of the battery, or to the corresponding engine or body ground of the vehicle to be started.

Starting the engine

Never use spray fluids to start the engine.

- Start the engine of the assisting vehicle and let it run for several minutes at an increased idle speed.
- 2. Start the engine of the vehicle being started in the usual way.
 - If the first starting attempt is not successful, wait a few minutes before making another attempt in order to allow the discharged battery to recharge.
- 3. Let both engines run for several minutes.
- Disconnect the jumper cables in the reverse order.

Check the battery and recharge if necessary.

Tow-starting and towing

Automatic transmission: transporting your vehicle

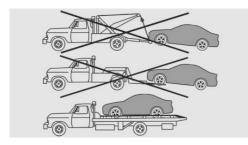

Note

Your vehicle is not permitted to be towed. Therefore, contact a service center in the event of a breakdown.

Do not have the vehicle towed
Have your vehicle transported on a loading platform only; otherwise, damage may occur.

✓

Tow truck

Do not lift the vehicle

Do not lift the vehicle by the tow fitting or body and chassis parts; otherwise, damage may result.

✓

Use the tow fitting screwed in at the front for maneuvering the vehicle only.

Towing other vehicles

General information

Light towing vehicle
The towing vehicle must not be lighter
than the vehicle being towed; otherwise, it will
not be possible to control the vehicle response.

Attaching the tow bar/tow rope correctly
Attach the tow bar or tow rope to the tow
fitting; connecting it to other vehicle parts may
cause damage. ◄

- Switch on the hazard warning system, depending on local regulations.
- ▶ If the electrical system has failed, clearly identify the vehicle being towed by placing a sign or a warning triangle in the rear window.

Tow bar

The tow fittings used should be on the same side on both vehicles.

Should it prove impossible to avoid mounting the tow bar at an offset angle, please observe the following:

- Maneuvering capability is limited during cornering.
- ➤ The tow bar will generate lateral forces if it is secured with an offset.

Tow rope

When starting to tow the vehicle, make sure that the tow rope is taut.

To avoid jerking and the associated stresses on the vehicle components when towing, always use nylon ropes or nylon straps.

Attaching the tow rope correctly

Only secure the tow rope on the tow fitting; otherwise, damage can occur when it is secured on other parts of the vehicle. ◄

Tow fitting

The screw-in tow fitting should always be carried in the vehicle. It can be screwed in at the front or rear of the BMW. It is stored in the onboard vehicle tool kit behind the left folding cover in the cargo area.

Tow fitting, information on use

- Use only the tow fitting provided with the vehicle and screw it all the way in.
- Use the tow fitting for towing on paved roads only.
- Avoid lateral loading of the tow fitting, e.g., do not lift the vehicle by the tow fitting.

Otherwise, damage to the tow fitting and the vehicle can occur.

✓

Screw thread

Push out the cover by pressing on the top edge.

Front

Rear

Tow-starting

Automatic transmission

Do not tow-start the vehicle.

Due to the automatic transmission, the engine cannot be started by tow-starting.

Have the cause of the starting difficulties remedied.

Care

Vehicle equipment

All standard, country-specific and optional equipment that is offered in the model series is described in this chapter. Therefore, equipment is also described that is not available in a vehicle, e. g., because of the selected optional equipment or country variant. This also applies for safety-related functions and systems.

Car washes

Hints

Steam jets or high-pressure washers When using steam jets or high-pressure washers, hold them a sufficient distance away and use a maximum temperature of 140 °F/60 °C.

If the vehicle has a glass sunroof, ensure that a distance of at least 31.5 inches/80 cm is maintained. Holding them too close or using excessively high pressures or temperatures can cause damage or preliminary damage that may then lead to long-term damage.

Follow the user's manual for the high-pressure washer.◀

Cleaning sensors/cameras with highpressure washers

When using high-pressure washers, do not spray the exterior sensors and cameras, e.g., Park Distance Control, for extended periods of time and only from a distance of at least 12 in/30 cm. ◀

Regularly remove foreign items such as leaves in the area below the windshield when the hood is raised.

Wash your vehicle frequently, particularly in winter.

Intense soiling and road salt can damage the vehicle.

Automatic car washes

Hints

Note the following:

- Give preference to cloth car washes or those that use soft brushes in order to avoid paint damage.
- Make sure that the wheels and tires are not damaged by the transport mechanisms.
- Fold in the exterior mirrors; otherwise, they may be damaged, depending on the width of the vehicle.
- Deactivate the rain sensor, refer to page 69, to avoid unintentional wiper activation.
- In some cases, an unintentional alarm can be triggered by the interior motion sensor of the alarm system. Follow the instructions on avoiding an unintentional alarm, refer to page 44.

Guide rails in car washes

Avoid car washes with guide rails higher
than 4 in/10 cm; otherwise, the vehicle body
could be damaged.◄

Before driving into a car wash

In order to ensure that the vehicle can roll in a car wash, take the following steps:

Automatic transmission:

- Drive into the car wash.
- 2. Engage transmission position N.
- Switch the engine off.In this way, the ignition remain

In this way, the ignition remains switched on, and a Check-Control message is displayed.

Do not turn off the ignition in the car wash

Do not turn off the ignition in the car wash; otherwise, the transmission position P is engaged and damages can result.◀

To start the engine:

- 1. Depress the brake pedal.
- 2. Press the Start/Stop button.

Pressing the Start/Stop button without stepping on the brake turns the ignition off.

The vehicle cannot be locked from the outside when in transmission position N. A signal is sounded when an attempt is made to lock the vehicle.

Transmission position

Transmission position P is engaged automatically:

- When the ignition is switched off.
- After approx. 15 minutes.

Headlamps

- Do not rub dry and do not use abrasive or caustic cleansers.
- Soak areas that have been soiled e.g. due to insects, with shampoo and wash off with water.
- Thaw ice with deicing spray; do not use an ice scraper.

After washing the vehicle

After washing the vehicle, apply the brakes briefly to dry them; otherwise, braking action can be reduced and corrosion of the brake discs can occur.

Completely remove all residues on the windows, to minimize loss of visibility due to smearing and to reduce wiper noises and wiper blade wear.

Vehicle care

Car care products

BMW recommends using cleaning and care products from BMW, since these have been tested and approved.

Car care and cleaning products

Follow the instructions on the container.

When cleaning the interior, open the doors or windows.

Only use products intended for cleaning vehicles.

Cleansers can contain substances that are dangerous and harmful to your health. ◀

Vehicle paint

Regular care contributes to driving safety and value retention. Environmental influences in areas with elevated air pollution or natural contaminants, such as tree resin or pollen can affect the vehicle's paintwork. Tailor the frequency and extent of your car care to these influences.

Aggressive substances, such as spilled fuel, oil, grease or bird droppings, must be removed immediately to prevent the finish from being altered or discolored.

Leather care

Remove dust from the leather often, using a cloth or vacuum cleaner.

Otherwise, particles of dust and road grime chafe in pores and folds, and lead to increased wear and premature degradation of the leather surface.

To guard against discoloration, such as from clothing, provide leather care roughly every two months.

Clean light-colored leather more frequently because soiling on such surfaces is substantially more visible. Use leather care products; otherwise, dirt and grease will gradually break down the protective layer of the leather surface.

Suitable care products are available from the service center.

Upholstery material care

Vacuum regularly with a vacuum cleaner.

If they are very dirty, e.g., beverage stains, use a soft sponge or microfiber cloth with a suitable interior cleaner.

Clean the upholstery down to the seams using large sweeping motions. Avoid rubbing the material vigorously.

Damage from Velcro® fasteners
Open Velcro® fasteners on pants or

other articles of clothing can damage the seat covers. Ensure that any Velcro® fasteners are closed. ◀

Caring for special components

Light-alloy wheels

When cleaning the vehicle, use only neutral wheel cleaners having a pH value from 5 to 9. Do not use abrasive cleaning agents or steam jets above 140 °F/60 °C. Follow the manufacturer's instructions.

Aggressive, acidic or alkaline cleaning agents can destroy the protective layer of adjacent components, such as the brake disk.

Chrome surfaces

Carefully clean components such as the radiator grille or door handles with an ample supply of water, possibly with shampoo added, particularly when they have been exposed to road salt.

Rubber components

Aside from water, treat only with rubber cleansers.

When cleaning rubber seals, do not use any silicon-containing car care products in order to avoid damage or reduced noise damping.

Fine wood parts

Clean fine wood facing and fine wood components only with a moist rag. Then dry with a soft cloth.

Plastic components

These include:

- Imitation leather surfaces.
- Headliner.
- Lamp lenses.
- Instrument cluster cover.
- Matte black spray-coated components.
- Painted parts in the interior.

Clean with a microfiber cloth.

Lightly dampen the cloth with water.

Do not soak the headliner.

Do not use cleansers that contain alcohol or solvents

Do not use cleansers that contain alcohol or solvents, such as lacquer thinners, heavy-duty grease removers, fuel, or such; this could lead to surface damage.

Safety belts

Dirty belt straps impede the reeling action and thus have a negative impact on safety.

A

Chemical cleaning

Do not clean chemically; this can destroy the webbing. ◀

Use only a mild soapy solution, with the safety belts clipped into their buckles.

Do not allow the reels to retract the safety belts until they are dry.

Carpets and floor mats

No objects in the area around the pedals Keep floor mats, carpets, and any other objects out of the area of motion of the pedals; otherwise, the function of the pedals could be impeded while driving

Do not place additional floor mats over existing mats or other objects.

Only use floor mats that have been approved for the vehicle and can be properly fixed in place.

Ensure that the floor mats are securely fastened again after they were removed for cleaning, for example. ◀

Floor mats can be removed from the passenger compartment for cleaning.

If the floor carpets are very dirty, clean with a microfiber cloth and water or a textile cleaner. To prevent matting of the carpet, rub back and forth in the direction of travel only.

Sensors/cameras

To clean sensors and cameras, use a cloth moistened with a small amount of glass cleaner.

Displays/screens

Clean the displays with an antistatic microfiber cloth.

Cleaning displays

Do not use chemical or household cleansers.

Keep all fluids and moisture away from the unit.

Otherwise, they could affect or damage surfaces or electrical components.

Avoid pressing too hard when cleaning and do not use abrasive materials; otherwise, damage can result. ◀

Long-term vehicle storage

Your service center can advise you on what to consider when storing the vehicle for longer than three months.
